- MGM Human Movement Science Lab with well equipped with 12 high end 240 fps optical cameras (Vicon, UK) and three force platforms (AMTI, USA) to measure kinetics and kinematics associated with human movements.
- Vicon Polygon is an integrated visualization and report editing tool for gait laboratories, enabling quick and easy creation of a gait report. It facilitates analysis of force, moment and joint angles. Polygon can read and analyze trial data that has been created with Vicon motion capture and processing software (such as workstation and Vicon iQ). Additionally it contains modeled data generated by Vicon biomechanical modelling software (such as Plug-in gait, bodybuilder and OLGA).
- AMTI biomechanics force platforms are designed to measure forces and moments applied to their top surface and as a direct result these instruments are sensitive to accelerations as well. Force plates can be used individually or arranged in a walkway format to collect multiple footfalls. The complete standard system consists of an Optima HPS-, BP- or OR-series force plate, an amplifier, a computer or data acquisition system, mounting hardware, and interconnecting cables.
- Plantar pressure analysis system (**novel emed and pedar systems**)
 - ✓ emed[®] pedography platforms are accurate electronic systems for recording and evaluating pressure distribution under the foot in static and dynamic conditions.

- ✓ The pedar-pda system is an in-shoe insole system which allows to study the foot within the footwear and therefore appropriate to study the impact of footwear on plantar pressures.
- Fitmate Med by COSMED, Italy is an electronic device developed for assessing resting metabolism, cardiorespiratory fitness (VO₂max) and basic spirometry (FVC, SVC, MVV). It allows personalized weight management programs and exercise prescriptions according to the ACSM's latest recommendations. It is a sensitive equipment that provides accurate respiratory gas analysis and real time oxygen consumption. Energy expenditure of activity is computed and comprehensive analysis of cardiorespiratory and metabolic systems allows for monitoring treatment outcomes and prescription of evidence based activity.
- 8 channel EMG: The ProComp Infiniti SA7500 encoder is an eight (8) channel, multi-modality device for real-time computerized biofeedback and data acquisition. It has 8 protected pin sensor inputs with two channels sampled at 2048 s/s and six channels sampled at 256 s/s. The ProComp Infiniti encoder is able to render a wide and comprehensive range of objective physiological signs used in clinical observation and biofeedback. All sensors are completely noninvasive and require little or no preparation for use.
- Step Activity Monitor: The Step-watch Step Activity Monitor (SAM) by Orthocare Innovations is a highly accurate ankle worn ambulatory activity monitor, the size of a small pager. The StepWatch works with a docking station and software that handles set-up, downloading, display, analysis, and many other functions. It detects steps for a wide variety of normal and abnormal gait style and cadence ranging from a slow shuffle to a fast run. It has a capacity to monitor and store data for a month.
- Anatomy models: Anatomy models for full body skeleton, spine, knee, shoulder, ankle and foot and wrist and hand are available to study anatomy and better visualize the human body.
- EMG/NCV for electro-diagnosis with a dedicated software can give precision reading of neuromuscular activities which can be used for diagnostic purpose
- LASER Equipment with scanning facility is available for treatment of inflammatory, painful conditions and various types of wounds.
- Chattanooga Multipurpose Electrotherapy Machine with therapeutic Ultrasound which consist of various low frequency and medium frequency therapeutic currents of various waveforms and dual frequency therapeutic ultrasound
- Portable Multi-channel EMG Machine with Biofeedback – with a dedicated software can give precision reading of muscular activities which can be used for both diagnostic and treatment purpose

- Jamar Hand Dynamometer is an instrument for measuring the maximum isometric strength of the hand and forearm muscles. It consists of a sealed hydraulic system with adjustable hand spacing's that measures handgrip force in pounds per square inch (PSI).
- Pollexograph which is a new tool to measure palmar abduction in clinical care
