CAPABILITY ENHANCEMENT AND SKILL DEVELOPMENT SCHEMES

EMPLOYABILITY

SKILL

DEVELOPMENT

7. Employability Skill Development

a. BLS Provider course

1. This Value added course was built to Provide safe environment for repeated practice of various Basic skills and to increase patient safety.

2. At the end of course the student should be able to Recognize cardiac arrest, Provide effective chest compressions , Provide artificial ventilation , Use AED , Provide First aid for common medical emergencies like trauma, hemorrhage , Burns, poisoning , Snakebite & dog bite etc and to teach communication skill and team dynamics.

BLS TRAINING

b. ACLS Provider course

1. The ACLS Provider Course is an advanced two day course which involves recognition of complex scenarios like cardiac arrest, arrhythmias, acute coronary syndrome or stroke etc and involves the use of diagnostic and therapeutic interventions like electrocardiogram (ECG), transcutaneous pacer, defibrillator etc.
2. This course is suitable for all medical, dental, physiotherapy, nursing and allied medical graduates, postgraduates and specialists working in a hospital or health care facility.
3.To pursue the ACLS Course, the candidate has to possess a valid AHA BLS Provider Card.

ACLS TRAINING

c. Course on Computer Application

1. The goals of medical education are to provide students and graduate clinicians specific facts and information , to teach strategies for applying this knowledge appropriately to the situations that arise in medical practice , and to encourage development of skills necessary to acquire new knowledge over a lifetime of practice.

d. Pharmacovigilance

1. WHO has defined Pharmacovigilance as the ~cience and activities dealing with Detection Assessment Understanding .Prevention of adverse drug reactions or any other possible drug related probl ems.
2. Pharmacovigilance Programme of India (PvPI) aims to improve patient safety and welfare of Indian population by monitoring the drug safety and thereby reducing the risk associated with use of medicines to safeg uard the health of the Indian population by ensuring that the benefits of use of medicine outweigh the risks associated with its use.

e. Clinical Biomechanics

1. This course helps students to Understand basic met hodology of movement anal ysis , Understand the princip les of biomechanical modeling, Understand theories of movement control and loading, Able to integrate and apply the above to analyze movement problems encount ered in patient population.

f. Explore DNA Fragments

Objective of designing this course is to impart the skill for the students from different educational fields such as MLT, Biochemistry, Genetics, Microbiology, Pharmacology and other paramedical and MBBS students at Undergraduate, Post graduate and MD level in order to Learn about DNA Isolation, PCR experiment designing and electrophoresis analysis of DNA molecules.

g. Zebrafish Husbandry Education

1. Zebrafish (Danio rerio) has become increasingly important model to scie ntific research, since 1960s.
2 It has several unique characteristics that make it a valuable model for studying human genetics and disease. Zebrafis h have a similar genetic structure to humans. They

share 70 per cent of genes with us. 84 per cent of genes known to be associated with human disease have a zebrafish counterpart. As a vertebrate, the zebrafish has the same major organs and tissues as humans. It is one of the fastest growing vertebrate organism. Zebrafish embryos are nearly transparent which allows researchers to easily examine the development of internal structures. Every blood vessel in a living zebrafish embryo can be seen using just a low-power microscope. One of the unique ability is to regenerate its heart muscle and fin. For example, if part of their heart is removed they can grow it back in a matter of weeks. These striking similarity to humans and novel characteristics has made this model to be widely used for various biomedical applications.

h. PALS instructor course

The PALS Provider Course is a TWO day course (16HRS) and includes training in basic life saving skills which includes recognizing a cardiac arrest or other life threatening situations like choking and provides training in high quality resuscitation skills including chest compressions and airway support. The course also teaches the effective use of an Automated External Defibrillator (AED). This course is suited for all medical, dental, physiotherapy, nursing and allied medical graduates and health care professionals Successful completion of the course results in an AHA BLS Provider Card.

i. Short course in advanced chest imaging

This Value added course was designed to make radiology professionals competent in physiological and anatomical aspects of cardiac and vascular imaging.

j. Short course in advanced cardiac imaging

This Value added course was designed to make radiology professionals competent in physiological and anatomical aspects of cardiac and vascular imaging.

k. Short course in advanced Neuro imaging

This value added course will help students to differentiate various types of focal intracranial lesions.

l. Course in advanced Body imaging

Students will develop expertise in the diagnosis and treatment of all diseases of abdomen and pelvis with special emphasis on hepato-biliary diseases, oncology,trauma, pre and post operative evaluations.

m. Short course in Radiology related to orthopedics

This Value added course was designed to make radiology professionals competent in anatomical aspects of orthopedic imaging.

n. Lateral Skull base dissection course

This Value added course was designed to make ENT surgery residents competent in upgrading knowledge on otolaryngology. The aim of this workshop is to train the senior ENT surgeons and take a step forward and expand its own limitation and get acquainted with lateral skull base.

o. Temporal bone dissection

This Value added course was designed to make ENT surgery residents competent in upgrading knowledge on otolaryngology. The aim of this workshop is to train the senior ENT surgeons and take a step forward and expand its own limitation and get acquainted with temporal bone dissection.

p. Critical care skill course

This Value added course was designed to train students in nbasic skills in Critical care. This will make students competent in all skills of Critical care.

q. Airway Management course

Airway management includes a set of maneuvers and medical procedures performed to prevent and relieve airway obstruction. This ensures an open pathway for gas exchange between a patient's lungs and the atmosphere. This is accomplished by either clearing a previously obstructed airway; or by preventing airway obstruction in cases such as anaphylaxis, the obtunded patient, or medical sedation. Airway obstruction can be caused by the tongue, foreign objects, the tissues of the airway itself, and bodily fluids such as blood and gastric contents (aspiration)

r. Microscope and staining technique

The development of the microscope is tightly coupled with developments in cell biology and medicine. Microscopes provide the observer with enhanced resolution (ability to observe two nearby objects as distinct objects), contrast (ability to detect different regions of the specimen on thebasis of intensity or colour) and magnification (ability to make small objects visible). The human eye can resolve objects of the order of 0.1 mm, while the light microscope can resolve objects on the order of 0.2 mm (200 nm) with a magnification of 1000X. The development of various types of optical microscopesincorporated the following components: microscope objectivesthat minimize chromatic and other optical aberrations (image distortion), stands that minimize mechanical vibrationsand sources of illumination from sunlight to lasers. Additionally, there were new methods of fixing and cuttingspecimens (microtomes), specimen staining techniques (dyes, stains, molecular probes) that increase specimen contrast. Also important were the development of variousoptical methods that provide contrast (phase and differentialinterference microscopes, fluorescence microscopes) for live cells, techniques for imaging long-term live cell cultures (time-lapse and video-microscopy), optical techniques to provide optical sectioning of specimens (confocal microscopes), and nonlinear-optical imaging techniques (multiphoton, harmonic generation and coherent antiStokes Raman microscopes).

s. Fundamentals of Genetics

1. Genetics isnotonly genes butevolution ofbiology onEarth,evolution of mankindwiththehelpofDNA.
2. The master molecule DNA issimply thecarbon,hydrogen,nitrogen and oxygen.But,thespecific bonding amongst these elements hasformed deox ynucleic acid(DNA)which haspowertoreplicate,andhasablueprintofevery life in its own unique way . It won 't be an overstatement , to say that 'it's a single fundamental element thatdefines lifeonearth'. The variations inthe DNA sequenceleadtospecificcharacteristics

which are normal but also can be disease causing. Human genetics deals with study of chromosomes, DNA, RNA, proteins leading to

inherited characteristics, which are physical, mental, normal and abnormal, in an individual, a family, a race or population. The science of Genetics has progressed exponentially after human genome project in year 2003. We have mapped human genome which helps in understanding the genetic basis of characters, diseases and also helps in inventing new treatments for these diseases even at sub molecular level. We are on the brink of developing precision medicine, i.e. medicines based on genotype of particular individual. Gene therapy, Gene editing has already made success stories. As we are witnessing the next revolution in medicine as Genetics, it's imperative to provide knowledge, understanding, and application of genetics for human diseases. The Fundamentals of Human Genetics course will take all the students from basics to advances in Genetics and keep them updated about this filed which is going to have tremendous impact on medical practice in recent future.

Value Added Course

BLS PROVIDER COURSE

Basic Life Support &First Aid

[Conducted by Department of Anesthesia]

1.Course Aspirants:

1) Ist, IInd, III/I year UG MBBS Students
2) Interns
3) PG Degree/Diploma Students

2. Objectives of Course: To Provide safe environment for repeated practice of various Basic skills and to increase patient safety. At the end of course the student should be able to :-

- Recognize cardiac arrest,
- Provide effective chest compressions
- Provide artificial ventilation
- Use AED
- Provide First aid for common medical emergencies like trauma, hemorrhage, Burns, poisoning, Snakebite & dog bite etc
- To teach communication skill and team dynamics

3. Duration of the Course:

- 16 hours

4. Course Content:

- **First Aid:** Airway obstruction management ,first aid for trauma, poisoning, hemorrhage, burns, dog bite , snake bite & common medical emergencies like bleeding from nose, convulsions etc
- **BLS**: chain of survival, Recognition of cardiac arrest, How to call for help, Chest compressions, Artificial ventilation, , AED use, Recognition and management of respiratory arrest, management of Obstructed airway, Infant and child CPR, Team dynamics

6. Teaching methods:a. Lectures
b. Videos
c. Practical skill demo on manikin
d. Practice sessions on manikin
e. Practice & skill on manikin
f. Team dynamics role play

- **7.Student Capacity**: 30 students

8.Assessment: a. Pre Test
b. Practical skill test (including team dynamic) using checklist (85% marks for passing)
c. Theory examination (MCQ) (85% marks for passing)
d. Remediation for poor performers
e. Post Test after remediation

Training schedule of Basic cardiac life support – Students (UG, PG)

Day 1 2pm to 5.30 pm

Sr No	ACTIVITY	Time
1	Introduction to BLS, Recognition of arrest	2.00—2.30
2	Core links chain of survival of BLS	2.30--- 3.00
3	Chest compression	3.00—3. 30
4	Video	3.30—4.00
5	Practice on Manikin	4.00---5.30

Day 2 2pm to 5.30 pm

Sr No	Activity	time
1	Airway problem after cardiac arrest, Airway management	2.00—2.45
2	Breathing, use of pocket mask and bag mask, ventilation	2.45--- 3.15
3	Foreign body obstruction adult and pediatric Respiratory arrest , treatment	3.15—4.15
4	Video of respiratory arrest management, practice	4.15—5.30

Day 3 2pm to 5.30 pm

Sr NO	Activity	time
1	AED lecture and video	2.00--- 2.45
2	Infant and child CPR	2.45--- 3.15
3	Practice of Infant and child CPR	3.15--- 4. 00
4	Team dynamics	4.00—5.30

Day 4 2pm to 5pm

Sr No	Activity	time
1	First Aid Lecture cum demonstration and video	2.30--- 4.00
2	Practice of techniques	4.00—5.00
3	Practice of chest compression and ventilation	5.00—5.30

Day 5 2pm to 5pm.

Sr No	Activity	time
1	Revision practice and team dynamics	2.00--- 3.00
2	CPR in special situations eg. pregnant patient, trauma.	3.00--- 3.30
2	Examination (theory)	3.30--- 4.00
3	Examination (practical)	4. 00--5.00
4	Remediation and feedback	5.00--- 5.30

Computers in Healthcare: Minimizing error and smart and swift Healthcare

The goals of medical education are to provide students and graduate clinicians specific facts and information, to teach strategies for applying this knowledge appropriately to the situations that arise in medical practice, and to encourage development of skills necessary to acquire new knowledge over a lifetime of practice.

Information technology is an increasingly important tool for accessing and managing medical information—both patient specific and more general scientific knowledge. Medical educators are aware of the need for all medical students to learn to use information technology effectively.

Computers also can play a direct role in the education process; students may interact with educational computer programs to acquire factual information and to learn and practice problem-solving techniques. In addition, practicing physicians may use computers to expand and reinforce their professional skills throughout their careers. The application of computer technology to education is often referred to as **computer assisted learning, computer-based education (CBE)**, or **computer-aided instruction (CAI)**.

With its vast storage capacity, a computer can be an extension of the student's memory, providing quick access to reference and new content.

Multimedia capabilities allow the computer to present rapidly a much larger number of images than can be accessed through a book or an atlas and to supplement the static images with sounds, video clips, and interactive teaching modules. Immersive interfaces, which present three-dimensional worlds and allow touch and force feedback through a joystick or instrumented glove, promise to support the training environment of tomorrow.

Ways Computers Are Used in Medicine

Medical Imaging
Medical imaging is a broad term that covers technology used to create images of the human body for study and diagnosis.

Patient Monitoring
Modern computer-based patient monitoring machines allow heart rate, respiratory activity, blood pressure and other critical vital signs to be collected automatically in digital form.

Computer-Assisted Surgery
Computers are used to assist in planning, teaching and performing many surgical procedures.

Networks and Digital Communication

Computer networks and the internet have increased the means of communication between medical professionals with email, instant messaging, video chats and webinars.

Telemedicine

The concept of a house visit is returning to health care in the form of telemedicine.

Electronic Health Records

Perhaps one of the newest major developments in health care, the electronic health record (EHR) is also one of the most far-reaching.

Medical Databases

Computers have brought the development of many useful software solutions in the medical field.

Medical Research

Much of the current research being done into incurable diseases like AIDS and cancer involves the creation of complex computer simulations.

Computers and Hospital Administration

Most hospitals depend heavily on computers and specialized software that handles patient records, supply inventory, personnel scheduling and all the other details required to care for patients.

Uses of Computer in Offices

- The typical doctor's office relies heavily on computer technology for day-to-day operations.
- Everything from patient scheduling to billing to filing insurance claims takes place through a computer. Many doctors no longer write prescriptions, but instead send a digital prescription from their office computer directly to the patient's pharmacy.
- During diagnosis, many doctors consult online databases of medical conditions using a computer instead of looking at a medical book.

Why to learn computer skills:

i. For this acquiring basic computer skill to use it effectively. To minimise error during working, patient care and early diagnosis with integrated approach for management of patient.
ii. To get updated Knowledge and remain as lifelong learner.
iii. To learn easy and swift communication skills such e-communication.
iv. Most important be aware of research and innovation around the world and able to collaborate with various agencies. For that to become effective presenter of project.

'Hence this program to develop paperless hospital in future'

Eligibility:

Medical students (MBBS); MSc; BSc allied health science, Post Graduate and PHD

VALUE ADDED COURSE ON PHARMACOVIGILLANCE

Pharmacovigilance is a system to monitor the safety and effectiveness of medicines and other pharmaceutical products. The word Pharmacovigilance is composed of two components Pharmacon meaning – Drug And Vigilare means to Keep aware or to keep alert. WHO has defined Pharmacovigilance as the science and activities dealing with Detection Assessment Understanding Prevention of adverse drug reactions or any other possible drug related problems .

Pharmacovigilance Programme of India (PvPI) aims To improve patient safety and welfare of Indian population by monitoring the drug safety and thereby reducing the risk associated with use of medicines to safeguard the health of the Indian population by ensuring that the benefits of use of medicine outweigh the risks associated with its use

VIGIFLOW is an Individual Case Safety Report (ICSR)management system developed and hosted by Uppsala monitoring centre (UMC).

All suspected ADRs with pharmaceutical medicines, medical devices , vaccines & Other pharmaceuticals which are known or unknown serious or non-serious Frequent or rare must be reported by Patients, patients' relatives or patient's caretakers health care professionals (physicians, dentists, pharmacists, radiographers, nurses and any other health care professionals) manufacturers authorities in the preformed Suspected ADR reporting forms.

Prompt reporting of ADRs to Regulatory Authorities prevents further damage helps in providing better patient care, brings down health care costs, makes healthcare professionals, patient & pharmaceutical industries aware ensure safe & proper use of medicines such is an Impact of Pharmacovigillance

Good pharmacovigillance programmes needed for every country. Pharmacovigillance should ideally be taught to small groups of medical students, interns, postgraduates etc. Teaching of PV should be problem-based, activity-based and linked to the rational use of medicines. Teaching pharmacovigillance to medical students makes them realize that all medicines can cause ADRs and their responsibility to participate in the national pharmacovigillance system. A major source for pharmacovigillance to get information about drug is spontaneous reporting. Pharmacovigillance must be linked to component on the rational use of medicines (RUM).

COURSE IN CLINICAL BIOMECHANICS

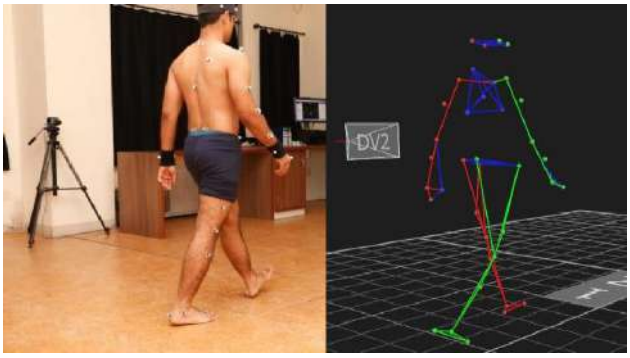
Our Partner: BETiC IITB

MGM Centre of Human Movement Science

Course in Clinical Biomechanics

Objectives

- ✓ Understand basic methodology of movement analysis
- ✓ Understand the principles of biomechanical modeling
- ✓ Understand theories of movement control and loading
- ✓ Able to integrate and apply the above to analyze movement problems encountered in patient population



Motion Analysis

Training Programs

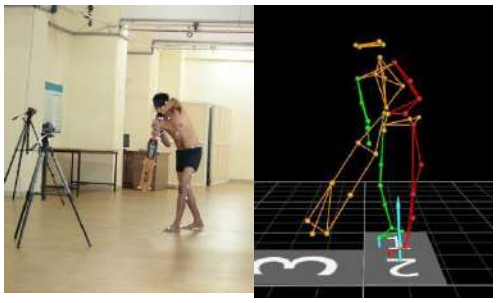
Clinical Services

Learning Outcomes:

On completion of this course you will achieve enhanced understanding of scope of movement analysis in patient evaluation

Pre-requisites:

Students, clinicians and professionals with BSc in Health science and/or Engineering or related field relevant to the area of Clinical Kinesiology can apply



Exploring Sports

Schedule (Total number of hours: 30 hours)

Day	Activity	Resource Person
Day 1:		
Activity: Movement Analysis & Modeling: Biological systems		
8.00-9.40am	Kinematics of movements	Dr. Rajani P Mullerpatan
9.45-10.25am	Kinetics of movement: Forces, Moments & Power	Prof Robert Van Duersen
10.30-10.50 am	Tea Break	
10.50—11.30 am	Link segment modelling: Inverse dynamics	Prof Robert Van Duersen
11.35—12.15 pm	Musculo-skeletal modeling-I - theoretical approaches	Prof Robert Van Duersen
12.20 - 1.00 pm	Musculo-skeletal modeling-II - clinical examples	Prof Robert Van Duersen
1.00 - 2.00	Lunch	
Activity: Movement Analysis &Modelling: Biological systems		
2.00-2.40 pm	Muscle mechanics	Prof Robert Van Duersen
2:40 – 4:00 pm	Pressure measurement	Dr. Rajani P Mullerpatan
4.00 - 4.30 pm	Tea Break	
4.30 - 6.30 pm	Plantar pressure exercise	Dr. Rajani P Mullerpatan
Day 2:		
Activity: Movement Analysis & Modelling: Biological systems		
8.00-9.40am	Applications of medical imaging in clinical biomechanics	AlgoSurg Team
9.45-10.25am	Introduction to finite element modeling	Dr.Rupesh Ghyar
10.30-10.50 am	Tea break	
10.50—11.30 am	Comprehensive modeling	Dr.Rupesh Ghyar
11.30—12.30 pm	Rehabilitation technology-continuum from clinical needs-research –industry entrepreneurship	Prof B Ravi
12.30 - 01.30 pm	Lunch	
Activity: Coordination of movement		
1:30 – 2:10 pm	Biomechanical principles guiding prosthetic design	Dr Sujatha Srinivasan

2:10 – 2:50 pm	Application of biomechanical principles to guide Yogasana research	Dr Omkar
2:50 – 3:15 pm	Tea break	
3:15 -6:30 pm	Demo and Practice (Kinovea / Surface EMG / CosMed)	
Day 3:		
Activity: Movement disorders in clinical environment		
8.00-9.40am	Musculo-skeletal conditions: Relation between loading, joint stability & articular cartilage damage (OA)	Prof Robert Van Duersen
9.45-10.25am	Neurological conditions- Motor control in stroke & CP-RPM,TS,AM	Dr. Rajani P Mullerpatan, Dr. Triveni Shetty (PT)
10.30-10.50 am	Tea break	
10.50—11.30 am	Activity monitoring & measurement of energy cost	Dr.Bela Agarwal (PT)
11.35—12.15 pm	Tissue Stress (Mechanics of hard and soft tissue, muscles, tendons, bone, cartilage, ligaments and development of material models of these tissues)	Dr Rajani Mullerpatan
12.20 - 1.00 pm	Group discussions-groups Use of movement analysis to guide rehabilitation -roadmaps	Dr.Bela Agarwal (PT) & Dr.Yuvraj Singh (PT)
1.00-1.40 pm	Plenary-Presentations from group discussions 5 min presentation for each group	Prof.B.Ravi & Dr. Rajani P Mullerpatan
1:40 – 2:40 pm	Lunch	
Activity: Integration		
2.45 - 3.30pm	Framework for clinical applications	Dr. Rajani P Mullerpatan
3.30-5.00pm	Course Evaluation & feedback (opinion)	Dr. Rajani P Mullerpatan
5.00pm onwards	Tea	

Resource Persons

Prof.Robert Van Deursen, Cardiff University, UK: Prof. Robert obtained a BSc in Physiotherapy in Utrecht, the Netherlands in 1981 and between 1982 and 1992 worked as a physiotherapist in various rehabilitation settings in the Netherlands, India, Sri Lanka and Zimbabwe. He studied at the Faculty of Human Movement Sciences, Free University, Amsterdam for an MSc (cum laude) in Movement Science (1991-1994) and at the Center for Locomotion Studies, The Pennsylvania State University, USA (1994 -1997) for a PhD in Biomechanics and Locomotion Studies. Prof. Robert joined the Department of Physiotherapy Education, University of Wales College of Medicine, Cardiff in 1998 as Lecturer/Research Co-ordinator; established the Research Centre for Clinical Kinaesiology in 1999; and became Senior Lecturer in 2002. In 2004, he was appointed as Director of Physiotherapy and became Chair of Research Strategy Committee, School of Healthcare Studies, in 2005.

Professor B Ravi – IIT B: Dr. B. Ravi is an Institute Chair Professor of Mechanical Engineering at IIT Bombay. He is a product of three well known institutions: National Institute of Technology (Rourkela) where he did his B.E. in 1986, Indian Institute of Science (Bangalore) for Masters and Ph.D., and Indian Institute of Technology (Bombay), where is working for the last 22 years. He held short visiting appointments in USA at West Virginia (1996) and Purdue University (2006). Prof. Ravi is committed to indigenous product innovation, and enhancing the employability of engineering students in the manufacturing sector.

Prof. Rajani Mullerpatan, MGM Center of Human Movement Science, MGMIHS, Navi Mumbai: Dr Rajani leads University Dept of Physiotherapy at MGM Institute of Health Sciences, Navi Mumbai. After completing her doctoral program at Research Centre for Clinical Kinesiology at Cardiff University, UK, she is currently focused on development of Biomechanics in India to meet local healthcare needs of Indian population. She has collaborated with leading national and international institutions in UK, Canada & Australia to promote training and research in clinical biomechanics & clinical rehabilitation and application in clinical care.

Dr.Bela Agarwal (PT), MGM Center of Human Movement Science, MGMIHS, Navi Mumbai: Dr. Bela completed her graduation from Seth.GS Medical College, Mumbai affiliated to the Bombay University with a ranked position and masters in Cardiovascular and Pulmonary Physiotherapy from LTMMC, Mumbai in 1992 again with a University rank. She has been working in the profession for 18 years in a variety of setups which include private clinics, hospitals and teaching institutes and has 9 years of teaching experience which included teaching graduate and post graduate student. Her interest lies in research in field of cardiopulmonary rehabilitation.

Dr.Rupesh Ghyar, BETiC- IITB: Rupesh holds a doctorate degree from IIT Bombay. His PhD thesis focused on Systematic Approach for Functional and Surgical Suitability Evaluation of Mega Endo-prostheses, which involves standardization of FEA coupled with experimental evaluation. He has a Masters degree was in Bioengineering, from University of Strathclyde (UK) and Bachelor's degree, in Mechanical Engineering, COEP ,Pune. He has worked for six years as a Senior Research Associate in OrthoCAD Network Research Cell at IIT Bombay. Earlier, he was a business development manager for OSIM India, an orthopaedic implant manufacturer.

Dr Sujatha Srinivasan: Dr. Sujatha graduated with her B.Tech in Mechanical Engineering from IIT-Madras in 1992, her MSME from the University of Toledo, USA in 1994, and after a long stint in the prosthetics industry, her PhD from the Ohio State University in 2007. She joined the faculty at IIT-Madras in 2008. Dr. Sujatha's work is in the areas of Prosthetics and Orthotics, Biomechanics and Mechanisms. Her Rehabilitation Research and Device Development (R2D2) group focuses on the development of assistive devices and aids for rehabilitation that are biomechanically and economically suited to Indian lifestyles and conditions.

Dr Omkar: Dr. Omkar is a visionary personality having more than 3 decades of experience in yoga. He is the direct disciple of Padmavibhushan Yogacharya Dr. B K S Iyengar and an ardent follower of the principles and philosophy of Sage Patanjali. With an academic accreditations of BE (Mechanical), M.Sc. (Engineering), PhD in Aerospace Engineering, currently Dr. S N Omkar is working as Chief Research Scientist at Indian Institute of Science, Dept of Aerospace Engineering.

Value Added Course

EXPLORE THE DNA FRAGMENTS

A 16 hours Value Added Course for Students

Explore the DNA Fragments

Department of Medical Biotechnology, Central Research Laboratory,

MGM SBS, Kamothe, Navi Mumbai

Department under Which Course to Be Conducted:

Department of Medical Biotechnology (Central Research Laboratory), MGM School of Biomedical Sciences, Kamothe, Navi Mumbai

Overview:

We all are acquainted with our DNA, but did we know that our cells synthesize enough DNA during our lifetime for accommodate the change in the environment and evolve continuously according to the environment. DNA Controls all the cellular activities inside the organisms by synthesizing or restricting the synthesis of proteins. One can think that how can the cellular machinery accomplish such a feat without making mistakes and how can cell packages the two meters long DNA in to compact nuclear structure without becoming a tangled mess?

Are you ready to go beyond the “what" of scientific information presented in textbooks and explore *how* scientists deduce the details of these molecular models? Take a behind-the-scenes look at modern molecular biology, genetics, from the classic experimental events that identified the proteins involved in DNA replication and repair to cutting-edge assays that apply the power of genome sequencing. Do you feel confident in your ability to design molecular biology experiments and interpret data from them? We've designed the problems in this course to build your experimental design and data analysis skills.

Objective:

Objective of designing this course is to impart the skill for the students from different educational fields such as MLT, Biochemistry, Genetics, Microbiology, Pharmacology and other paramedical and MBBS students at Undergraduate, Post graduate and MD level in order to Learn about DNA Isolation, PCR experiment designing and electrophoresis analysis of DNA molecules.

Title : Explore the DNA Fragments

Duration of the Course: 16 hours (2 days)

Eligibility:

MLT, Biochemistry, Genetics, Microbiology, Pharmacology and other paramedical and MBBS students at Undergraduate, Post graduate, MD level and teaching staff of medical and paramedical field as well will be eligible to apply for this course.

Course Outline:

- Overview of DNA extraction
- Basic Training on DNA Extraction from Blood
- Basic Training on DNA Extraction from Bacteria
- Primer Designing for PCR experiment
- Overview on PCR and its Types
- Hands on training on PCR
- Gel Electrophoresis Overview
- Hands on training on Agarose Gel Electrophoresis
- Hands on training on Polyacrylamide Gel Electrophoresis

Teaching learning method:

- Interactive lectures
- Demonstration of relevant topics
- Hands-on of all the procedure

Assessment: Pre Test / Post Test / Feedback

Annual Intake:

Per Batch 10 students and it will be flexible as per the resources and persons availability

Fee Structure:

The participation fees will be charged as per MGM-SBS Policy for training and skill development

Zebrafish Husbandry Education

Department under Which Course to Be Conducted:

Department of Medical Biotechnology (Central Research Laboratory), MGM School of Biomedical Sciences, Kamothe, Navi Mumbai

Overview: Why there is a need of Zebra fish as a "Research Model"?

Zebrafish (Danio rerio) has become increasingly important model to scientific research, since 1960s. It has several unique characteristics that make it a valuable model for studying human genetics and disease. Zebrafish have a similar genetic structure to humans. They share 70 per cent of genes with us. 84 per cent of genes known to be associated with human disease have a zebrafish counterpart. As a vertebrate, the zebrafish has the same major organs and tissues as humans.

It is one of the fastest growing vertebrate organism. Zebrafish embryos are nearly transparent which allows researchers to easily examine the development of internal structures. Every blood vessel in a living zebrafish embryo can be seen using just a low-power microscope. One of the unique ability is to regenerate its heart muscle and fin. For example, if part of their heart is removed they can grow it back in a matter of weeks.

These striking similarity to humans and novel characteristics has made this model to be widely used for various biomedical applications.

Objective:

1. To study the research model, *Danio rerio*, widely used in biomedical applications.
2. To describes operating procedure for caring and husbandry of zebra fish

Course duration:

Duration of this course is two days (8 hrs each day) = 16hrs

Course content:

1. Background information on zebrafish
2. Maintenance of Zebrafish
3. Breeding
4. Behavioral studies
5. Removal of embryos from the chorion
6. Microscopic observations
7. Staining techniques

Outcome:

- Students will learn Zebrafish husbandry
- Behavioral parameters could be observed and studied
- Different staining techniques and its microscopic observations will be studied

Title: Zebrafish Husbandry Education

Eligibility*:*

UG / PG / Medical / SBS / Physiotherapy / Nursing / Dental – students or faculty of MGMIHS & others.

Course Outline:

The course is a 16 hours value added course for students of MGMIHS. This course will be delivered as a two day session of 8hrs each day.

Both session will cover a unique and informative topic followed by practical session.

The sessions will include:

- Tips on maintaining Zebrafish and larvae at laboratory level
- Different techniques of breeding to increase the number of larvae
- Hands-on behavioral study of parameters to observe the effect of any product or drug and removing embryos from the chorion
- Staining and development of bone and cartilage of in Zebrafish larvae
- Microscopic observations of stained as well as unstained larvae to understand the difference between the two

Teaching learning method:

Theoretical and experimental sessions, Interactive sessions, questionnaires.

Assessment: Pre Test / Post Test / Feedback

Annual Intake:

Per Batch 10 students and it will be flexible as per the resources and persons availability

Fee Structure:

The participation fees will be charged as per MGM-SBS Policy for training and skill development

Value Added Course

BLS INSTRUCTOR COURSE

MISSION STATEMENT

- To provide early exposure for medical students to both clinical as well as life support skills
- To impart high quality standardised procedural and clinical skills training for interns and junior doctors
- Impart AHA Accredited Basic Life Support (BLS) and Advanced Cardiac Life Support (ACLS) training courses
- To introduce Life Support Skills Training into medical and allied curriculum as competency based education
- To educate the community at large about cardiac arrest and basic resuscitation skills

CLINICAL SKILLS COURSES

- **Basic Clinical Skills**

  Recording blood pressure, Veni-puncture, Arterial Blood Gas sample, Central cannulations, Urinary catheter & Naso-gastric tube insertions

- **Basic Surgical skills**

  Surgical Handwash, Scrubbing, Gowning, Surgical Draping, Suturing techniques, Intercostal Drain insertion, Surgical Etiquettes

- **Airway Skills**

  Ambu bag ventilation, Laryngeal Mask Airway (LMA) insertion, Intubation, Needle Crico-thyrotomy, Tracheostomy

- This course is suitable for all medical, dental, nursing and allied medical graduates, postgraduates and specialists working in a hospital or health care facility
- Course completion certificate is issued on successful completion of the course
- Course Fees: Rs Three Thousand only per Module (Rs 3000/- only/module)

AHA COURSES (BLS INSTRUCTOR COURSE)

- **The BLS INSTRUCTOR Course** is a TWO day (16 HRS) course and includes training in basic life saving skills which includes recognizing a cardiac arrest or other life threatening situations like choking and provides training in high quality resuscitation skills including chest compressions and airway support. The course also teaches the effective use of an Automated External Defibrillator (AED)
- This course is suited for all medical, dental, physiotherapy, nursing and allied medical graduates and health care professionals
- Successful completion of the course results in an AHA BLS Provider Card
- Course Fees: Rs Three Thousand Five Hundred only

- **The ACLS Provider Course** is an advanced two day course (16 HRS) which involves recognition of complex scenarios like cardiac arrest, arrhythmias, acute coronary syndrome or stroke etc and involves the use of diagnostic and therapeutic interventions like electrocardiogram (ECG), transcutaneous pacer, defibrillator etc
- This course is suitable for all medical, dental, physiotherapy,nursing and allied medical graduates, postgraduates and specialists working in a hospital or health care facility. To pursue the ACLS Course, the candidate has to possess a valid AHA BLS Provider Card
- Successful completion of the course results in an AHA ACLS Provider Card
- Course Fees: Rs Five Thousand only

EDUCATION TOOLS

1. Power point presentation
2. Interactive lecture
3. AHA BLS ACLS course videos

TRAINING

1. Hands on training
2. AHA ‘Practice While Watching’ videos

EQUIPMENT

1. CPR manikins with AMBU bag mask and pocket mask
2. Airway manikins
3. Basic and advanced skill trainers
4. ALS manikin (advanced life support with arrhythmia trainer)
5. AED trainer & ECG simulator

ACLS [Advance Cardiac Life Support]

[Conducted by Dept of Anesthesia]

1. Aspirants: 1) III/II year UG MBBS Students

2) Interns

3) PG Degree/Diploma Students

2. Objective of course: At the end of course the students should be able to:

1. Give effective basic cardiac support
2. Use advanced airway
3. Use Monitors for assessing efficacy of resuscitation
4. Use drugs properly during resuscitation
5. Advice for blood for investigations
6. Recognize arrhythmias and manage them by using drugs, defibrillation and cardio version
7. Provide emergency treatment for myocardial infarction and cerebrovascular accidents
8. Provide post cardiac arrest treatment
9. Possess communication skill, and team dynamics.

3. Duration of the Course:

- 16 hours

4. ACLS Course Content:

- Difference between BLS and ACLS, use of advance airway gadgets, use of Conventional defibrillator, rhythms of cardiac arrest and management, recognition and management of other cardiac arrhythmias, Acute coronary syndrome , cerebral vascular accidents and post cardiac arrest care.

6. Teaching methods: a. Lectures

b. Videos

c. Practical skill demo on manikin

d. Practice sessions on manikin

e. practice & skill on manikin

f. Team dynamics role play

7. Student Capacity: 30 students

8. Assessment: a. Pre Test

b. Practical skill test (including team dynamic) using checklist (85% marks for passing)

Training schedule of ACLS (Advanced Cardiac Life Support)

Day 1 2pm to 5.30 pm

Sr No	Activity	Time
1	Objective of ACL, Difference between BLS & ACLS	2.00—2.30
2	Treatment and outline	2.30—3.15
2	BLS practice stations,	3.15—4. 15
3	Chest compression/ ventilation/ AED	3.45--- 4.15
4	Team dynamics in ACLS,, lecture and video	4.15—5.30s

Day 2 2pm to 5.30pm

Sr No	Activity	Time
1	Respiratory arrest,(recognition, causes) video	2.00—2.30
2	Treatment video	2.30—3.00
3	Use of Advanced airway gadgets- lecture	3.00—3.30
4	Practice session	4.00—5.30

Day 3 2pm to 5.30 pm

Sr No	Activity	Time
1	Rhythms of cardiac arrest, recognition	2.00—2.30
2	Causes and treatment of PEA	2.30—3.00
3	Treatment of VF, Defibrillation and cardio version demonstration	3.15—4.00
4	Practice on conventional defibrillator, team dynamics	4.00—5.30

Day 4 2pm to 5.30 pm

Sr No	Activity	Time
1	Tachyarrhythmia narrow complex- management	2.00---3.00
2	Tachyarrhythmia broad complex-- management	3.00—3.30
3	Bradyarrythmias	3.30—4.00
4	Recognition of arrhythmia on simulator, putting it together	4.00—4.30
5	Practice session	4.30—5.30

Day 5 2pm to 5 pm.

Sr No	Activity	Time
1	Practice of team dynamics	2.00—2.30
1	Acute coronary syndrome	2.30—3.00
2	Cerebrovascular accident	3.00—3.30

2. Objectives of Course: To Provide safe environment for repeated practice of various Basic skills and to increase patient safety. At the end of course the student should be able to :-

- Recognize cardiac arrest,
- Provide effective chest compressions
- Provide artificial ventilation
- Use AED
- Provide First aid for common medical emergencies like trauma, hemorrhage, Burns, poisoning, Snakebite & dog bite etc
- To teach communication skill, and team dynamics

3. Duration of the Course:

- 16 hours

4. Course Content:

- **First Aid:**, Airway obstruction management ,first aid for trauma, poisoning, hemorrhage, burns, dog bite , snake bite & common medical emergencies like bleeding from nose, convulsions etc
- **BLS:** chain of survival, Recognition of cardiac arrest, How to call for help, Chest compressions, Artificial ventilation, , AED use, Recognition and management of respiratory arrest, management of Obstructed airway, Infant and child CPR, Team dynamics

6. Teaching methods:

a. Lectures

b. Videos

c. Practical skill demo on manikin

d. Practice sessions on manikin

e. Practice & skill on manikin

f. Team dynamics role play

- **7.Student Capacity**: 30 students

8. Assessment: a. Pre Test

Training schedule of Basic cardiac life support – Students (UG, PG)

Day 1 2pm to 5.30 pm

Sr No	ACTIVITY	Time
1	Introduction to BLS, Recognition of arrest	2.00—2.30
2	Core links chain of survival of BLS	2.30--- 3.00
3	Chest compression	3.00—3. 30
4	Video	3.30—4.00
5	Practice on Manikin	4.00---5.30

Day 2 2pm to 5.30 pm

Sr No	Activity	time
1	Airway problem after cardiac arrest, Airway management	2.00—2.45
2	Breathing, use of pocket mask and bag mask, ventilation	2.45--- 3.15
3	Foreign body obstruction adult and pediatric Respiratory arrest , treatment	3.15—4.15
4	Video of respiratory arrest management, practice	4.15—5.30

Day 3 2pm to 5.30 pm

Sr NO	Activity	time
1	AED lecture and video	2.00--- 2.45
2	Infant and child CPR	2.45--- 3.15
3	Practice of Infant and child CPR	3.15--- 4. 00
4	Team dynamics	4.00—5.30

Day 4 2pm to 5pm

Sr No	Activity	time
1	First Aid Lecture cum demonstration and video	2.30--- 4.00
2	Practice of techniques	4.00—5.00
3	Practice of chest compression and ventilation	5.00—5.30

Day 5 2pm to 5pm.

Sr No	Activity	time
1	Revision practice and team dynamics	2.00--- 3.00
2	CPR in special situations eg. pregnant patient, trauma.	3.00--- 3.30

Value Added Course on Gender Sensitization

Introduction :

Gender of a person and attitude of people towards gender have very high impact on personal and social health. Gender discrimination, female feticide, sexual harassment and abuse are results of unhealthy gender attitude . This develops unknowingly because of peculiar sexual socialization. Only information about reproductive system will not be able to change this attitude as it involves de-learning and re-learning. There is need for proactive efforts to develop healthy gender attitude

We want to introduce a value added course on gender sensitization which will deal with these issues and will help to find solutions. This course is in addition to inclusion of gender sensitization in curriculum.

Objectives :

At the end of course the participant will have added value in :

Knowledge - Concept of sex and gender

Issues related with gender

Sexual socialization and literacy

Sexual orientation and related issues

Sexual abuse and related laws

Skills - Identification of areas where personal and social health is having impact of gender

Able to work as resource person whenever required

Attitude - Developing healthy gender attitude without bias, judgment and label

Course coordinator : Dr. Swati Shiradkar

Department under which course to be conducted:

Department of OBGY and ICC

Title : Let us have a healthy gender attitude

Who can take this course: UG and PG Medical /Physiotherapy / Nursing Students

Medical and Non Medical Teachers

Social Workers interested to work in this area (min 12th)

Annual Intake : one batch of 30 to 40 participants , 16 contact hours excluding college timings over 2 months

Fee Structure: Open for discussion as the Subject is on social interest

Syllabus: Concept of gender and biological sex

Gender identity, Expression and Related problems

Sexual Orientation and effects on psychological, physical and social health

Conflicts because of gender and sex roles and their effect on health

Special areas where gender has significant role in life like resource availability, position in family and society , power of decision making and health

Sexual abuse and related laws

What is health gender attitude

Teaching -Learning Methods : Interactive lectures

Role plays

Case studies

Assessment : Pre Test / Post Test / Feedback

Course :- Happiness Through Enhanced Emotional Intelligence

Introduction:

Emotional intelligence (EQ/EI) is defined as an ability to identify, consider and control emotions in oneself and to recognize them in others, brought on by a combination of self awareness, self management, social awareness and relationship management.

Intelligent quotient (IQ) correlates with academic success but often fails to assure personal and professional success. EQ on other hand is a spastically significant factor in achieving personal and professional growth. While IQ is inborn god gift; EQ can be improved by learning strategies in areas of self awareness, social awareness and relationship management. Most of the professional courses including medical courses offer little to improve EQ of participants in these course. Present value added course is designed to enable students/participants to lead a happy and fulfilling life by using strategies of EQ/EI.

Course objectives:-

Objectives are divided in three domains of learning

Knowledge	Skill/psychomotor	Attitude/affective
Understanding biology of emotions	Identify emotions in others	Self observation of own emotions and response body to it
Understanding psychological aspect of emotions	Initiate communication.	Improve sleep hygiene
Role of emotions in daily life	Communication in different settings	Know whom and what pushes your buttons
Study of role of emotions in professional life	Practice of individual strategies and skills	Observing emotions in others
Learning healthy strategies for emotional management	Keep journal about emotions(mood charts)	Social awareness and communication
Learning theoretical aspects of communication skills	Seeking feedback	Live in the moment
Learning nuances of relationship	Self management in daily life	Relationship management through role plays

Course coordinator : *Dr. Swati Shiradkar, Dr Manik Bhise*

Department under which course to be conducted : Department of OBGY and Psychiatry

Who can take this course: UG and PG Medical /Physiotherapy / Nursing Students Medical and Non Medical Teachers

Annual Intake : one batch of 30 to 40 participants , 16 contact hours excluding college timings over 2 months

Fee Structure: Rs 2000/- per head (Open for discussion as the Subject is on social interest)

Syllabus: Identifications of our own emotions

Expressions of emotions in right way

Management of emotions

Understanding emotions of others

Improving intra and inter personal relations.

Management of stress arising out of emotions.

Teaching -Learning Methods : Interactive lectures

VALUE ADDED COURSE ON PHARMACOVIGILLANCE

Pharmacovigilance is a system to monitor the safety and effectiveness of medicines and other pharmaceutical products. The word Pharmacovigilance is composed of two components Pharmacon meaning – Drug And Vigilare means to Keep aware or to keep alert. WHO has defined Pharmacovigilance as the science and activities dealing with Detection Assessment Understanding Prevention of adverse drug reactions or any other possible drug related problems .

Pharmacovigilance Programme of India (PvPI) aims To improve patient safety and welfare of Indian population by monitoring the drug safety and thereby reducing the risk associated with use of medicines to safeguard the health of the Indian population by ensuring that the benefits of use of medicine outweigh the risks associated with its use

VIGIFLOW is an Individual Case Safety Report (ICSR)management system developed and hosted by Uppsala monitoring centre (UMC).

All suspected ADRs with pharmaceutical medicines, medical devices , vaccines & Other pharmaceuticals which are known or unknown serious or non-serious Frequent or rare must be reported by Patients, patients' relatives or patient's caretakers health care professionals (physicians, dentists, pharmacists, radiographers, nurses and any other health care professionals) manufacturers authorities in the preformed Suspected ADR reporting forms.

Prompt reporting of ADRs to Regulatory Authorities prevents further damage helps in providing better patient care, brings down health care costs, makes healthcare professionals, patient & pharmaceutical industries aware ensure safe & proper use of medicines such is an Impact of Pharmacovigillance

Good pharmacovigillance programmes needed for every country. Pharmacovigillance should ideally be taught to small groups of medical students, interns, postgraduates etc. Teaching of PV should be problem-based, activity-based and linked to the rational use of medicines. Teaching pharmacovigillance to medical students makes them realize that all medicines can cause ADRs and their responsibility to participate in the national pharmacovigillance system. A major source for pharmacovigillance to get information about drug is spontaneous reporting. Pharmacovigillance must be linked to component on the rational use of medicines (RUM).

MGM's Medical College, Aurangabad
Name of the Department: Physiology
Value added certificate course in Yoga & Fitness programme:

The MGM's Medical College, Aurangabad is committed to create an environment where students feel empowered to improve upon their learning behavior for which mere academic inputs is not enough. Going beyond it, they are provided with the training that contributes in their capacity building by motivating them to train their inner self, through emotional management, Self-understanding and positive thinking. Yoga training can help students to strengthen their potentials.

Institution conducts a value added certificate course in Yoga & Fitness programme for students in view with making them conscious of the importance of physical and mental wellbeing.

Objectives of yoga training programme are as follows:

- To enhance the capacities of students for physical and mental wellbeing through self help.
- To develop healthy habits for better health
- To empower student teachers to create a harmonious classroom at workplace.

The yoga course is one of the value added course that this Institute offers. It is research based course wherein the effectiveness of the course is studied through students' post training feedback and pre-test and post achievement tests.

Before commencing with the yoga training, students will be given pre-test where their knowledge or awareness about yoga is checked. On the basis of the outcomes of the pre-test, the programme is designed or modified to make it mode need based for trainee students.

The modified version of the Training package is then implemented. The course will be conducted by the expert Yoga teachers who are invited to run the course. The content of the course include theory as well as practical demonstrations and practice of different types of pranayama and Yogasans.

The achievement test including practicals and theory is administered to check the learning outcomes in terms of knowledge and awareness about yoga. The students' feedback too will be taken to find the effectiveness of the programme. The students will be awarded with the course completion certificates.

Complete package of 20 hours training programme in a span of 10 to 11 days was designed in collaboration with the well-known Naturopathy & Yoga Center at MGM's Camus in Aurangabad. It included developing understanding of the concept of Yoga, theoretical and scientific bases for the Yogasans and pranayama and practice sessions for learning these asana and pranayama. Similarly, students were trained in Surya Namaskar and yogic jogging. These sessions will be conducted by the trained yoga teachers. Finally the Practical and theory examination will be held. As discussed above pre-test and post-test will be taken. Achievement test will be taken to see their performance level. Quantitative assessment will be done and marks will be assigned. Students will be awarded with the certificate endorsed by Naturopathy & Yoga Center at MGM's Camus in Aurangabad.

DEPARTMENT OF MICROBIOLOGY

CRITERIA-1

VALUE ADDED COURSE (VAC)

1. TOPIC: Nutrition and Dietetics

2. INTRODUCTION:

- Good nutrition is the key to good mental and physical health. Eating a balanced diet is an important part of good health of every one. Food is the foremost necessity of any living being but in present day when we talk about food then just food is not enough, it should be nutritious food. The kind and amount of food you eat affects the way you feel and how your body works.
- Nutrition is the intake of food considered in relation to the body's dietary needs. An adequate well balance diet combined with regular physical activity is corner stone of good health.
- Nutrition related diseases may be due to deficiency or excess in the diet, for example obesity, eating disorders, chronic diseases such as cardiovascular diseases, cancer and diabetes mellitus.

3. OBJECTIVE:

- Advancements in undergraduate medical education should be done in the field of nutrition, following reiteration that it is within the responsibility of doctors to address nutrition related issues concerning patients and the public.

- The expectation on doctors to provide nutrition care is increasing due to the rising prevalence of nutrition related diseases and patient's preference to receive nutrition care from doctors rather than other health professionals.
- In order to provide effective nutrition care, doctors need knowledge of basic sciences related to nutrition and diet, skills in nutritional assessment, counseling and attitudes that are conducive in providing nutrition care when appropriate.
- In recognition of the role of nutrition and diet in optimal health, our department has chosen the topic "Nutrition and Dietetics" as a value added course for undergraduate medical students.

4. COURSE FACILITATORS -

1) **Mrs. Rasika Deshmukh, consultant dietician**
2) **Mrs. Renuka Raje, consultant dietician, MGM Medical college**
3) **Mrs. Rohini Patil, consultant dietician, MGM Medical college**
4) **Mr. Rahul Deshmukh, Quality coordinator, MGM Medical college**
5) **Dr. Salve ,HOD Dept of PSM, MGM Medical college**

5. COURSE DURATION: 16 hrs

Fundamentals of Human Genetics Course

Introduction-

Genetics is not only genes but evolution of biology on Earth, evolution of mankind with the help of DNA. The master molecule DNA, is simply the carbon, hydrgen, nitrogen and oxygen. But, the specific bonding amongst these elements has formed deoxynucleic acid (DNA) which has power to replicate, and has a blue print of every life in its own unique way. It won't be an overstatement, to say that 'it's a single fundamental element that defines life on earth'. The variations in the DNA sequence lead to specific characteristics which are normal but also can be disease causing.

Human genetics deals with study of chromosomes, DNA, RNA, proteins leading to inherited characteristics, which are physical, mental, normal and abnormal, in an individual, a family, a race or population.

The science of Genetics has progressed exponentially after human genome project in year 2003. We have mapped human genome which helps in understanding the genetic basis of characters, diseases and also helps in inventing new treatments for these diseases even at sub molecular level. We are on the brink of developing precision medicine, i.e. medicines based on genotype of particular individual. Gene therapy, Gene editing has already made success stories. As we are witnessing the next revolution in medicine as Genetics, it's imperative to provide knowledge, understanding, and application of genetics for human diseases. **The Fundamentals of Human Genetics course** will take all the students from basics to advances in Genetics and keep them updated about this filed which is going to have tremendous impact on medical practice in recent future.

Course outline

16 hours course spread over 2 months, every Saturday, 2-4pm

1. An introduction to human Genetics
2. The cell cycle
3. Understanding the chromosomes
4. Understanding the DNA, RNA and basis of inheritance
5. Modes of inheritance
6. Chromosomal Diseases
7. Developmental Genetics/ embryogenesis and organogenesis/ Dysmorphology
8. Biochemical Genetics- Inborn errors of metabolism- small molecule and large molecule Diseases, hemoglobinopathies
9. Cancer genetics
10. Laboratory Genetics- Cyto genetic and molecular genetic techniques for investigations in
11. Genetic counselling
12. Genetic Screening.

INCLUSION OF " GENDER SENSATIZATION" IN CURRICULUM

Introduction :

The health care provider should have a healthy gender attitude, so that discrimination, stigmatization, bias while providing health care will be avoided. The health care provider should also be aware of certain medico legal issues related with sex & gender.

Society particularly youth & adolescents need medically accurate, culturally & agewise appropriate knowledge about sex, gender & sexuality. So we can train the trainers for the same. It is need of the hour to prevent sexual harassment & abuse .

To fulfill these objectives, some suggestions are there for approval of BOS.

Outline

1)For undergraduates :- Three sessions of two hours each, one in 2^{nd} term, one in 3^{rd} term & one in 8^{th} term.

2)For Faculties and postgraduates :- One session of two hrs .

3)For those want to be trainers or interested for their ownself, value added course, which is optional about sex, gender, sexuality & related issues.

Responsibility

ICC of MGM, MCHA , with necessary support from IQAC & respective departments.

Details of undergraduate sessions

1)First session in 2nd term

Aim – To make Students aware about the concept of sexuality & gender.

To check accuracy of knowledge they have,

To make them comfortable with their own gender identify & related issues.

To make them aware about ICC & it is functioning.

Mode – Brain storming , Interactive power point presentation experience sharing.

Duration – Around two hours

Evaluation – Feedback from participants.

2)Second session in 3rd / 4th term

Aim – To ensure healthy gender attitude in these students as now they start interacting with patients.

To ensure that the maintain dignity privacy while interacting with patients and relatives, particularly gender related.

To make them aware about importance of confidentiality related with gender issues.

To encourage them to note gender related issues affecting health care & seek solutions.

Mode – focused group discussions on case studies, Role plays & discussion.

Duration – Around two hours.

Evaluation – Feedback from participants.

Third session in 8th term.

Aim – To understand effect of gender attitudes on health care in various subjects.

To develop healthy gender attitude while dealing with these issues.

Mode – Suggested PBL by departments individually. (In collaboration with ICC till faculty sensitization is complete)

Evaluation – Feedback

****

FOR FACULTIES

Session of 2 hours may be during combined activities.

Aim – To ensure clarity of concept abut gender & sex.

To discuss effect of these concept on health related issues.

To identify such gender & sex related issues in indivual subject specialties.

To discuss methodology like PBL for under graduate students when whey are in 7^{th}-8^{th} semester.

Mode – Role play

Focused group discussion

Case studies

Evaluation – Feed back.

******

FOR POSTGRADUATES

Session of 2-3 hrs preferably in induction program.

Aim – To introduce medically accurate concept of gender, sex, gender role & sex role.

To ensure healthy gender attitude at workplace.

To understand gender associated concepts on health related issues & avoid such bias wile providing health care.

To make them aware about ICC & it's functioning.

Mode – Interactive PPT

Role plays & discussion

Duration – 2 to 3 hrs

Evaluation – Feedback.

Value Added Course

PALS INSTRUCTOR COURSE

MISSION STATEMENT

- To provide early exposure for medical students to both clinical as well as life support skills
- To impart high quality standardised procedural and clinical skills training for interns and junior doctors
- Impart AHA Accredited Basic Life Support (BLS) and Advanced Cardiac Life Support (ACLS) training courses
- To introduce Life Support Skills Training into medical and allied curriculum as competency based education
- To educate the community at large about cardiac arrest and basic resuscitation skills

CLINICAL SKILLS COURSES

- **Basic Clinical Skills**

  Recording blood pressure, Veni-puncture, Arterial Blood Gas sample, Central cannulations, Urinary catheter & Naso-gastric tube insertions

- **Basic Surgical skills**

  Surgical Handwash, Scrubbing, Gowning, Surgical Draping, Suturing techniques, Intercostal Drain insertion, Surgical Etiquettes

- **Airway Skills**

  Ambu bag ventilation, Laryngeal Mask Airway (LMA) insertion, Intubation, Needle Crico-thyrotomy, Tracheostomy

- This course is suitable for all medical, dental, nursing and allied medical graduates, postgraduates and specialists working in a hospital or health care facility
- Course completion certificate is issued on successful completion of the course
- Course Fees: Rs Three Thousand only per Module (Rs 3000/- only/module)

AHA COURSES (PALS INSTRUCTOR COURSE)

- **The PALS INSTRUCTOR Course** is a TWO day course (16 HRS) and includes training in basic life saving skills which includes recognizing a cardiac arrest or other life threatening situations like choking and provides training in high quality resuscitation skills including chest compressions and airway support. The course also teaches the effective use of an Automated External Defibrillator (AED)
- This course is suited for all medical, dental, physiotherapy, nursing and allied medical graduates and health care professionals
- Successful completion of the course results in an AHA BLS Provider Card
- Course Fees: Rs Three Thousand Five Hundred only

- **The ACLS Provider Course** is an advanced two day course (16 HRS) which involves recognition of complex scenarios like cardiac arrest, arrhythmias, acute coronary syndrome or stroke etc and involves the use of diagnostic and therapeutic interventions like electrocardiogram (ECG), transcutaneous pacer, defibrillator etc
- This course is suitable for all medical, dental, physiotherapy,nursing and allied medical graduates, postgraduates and specialists working in a hospital or health care facility. To pursue the ACLS Course, the candidate has to possess a valid AHA BLS Provider Card
- Successful completion of the course results in an AHA ACLS Provider Card
- Course Fees: Rs Five Thousand only

EDUCATION TOOLS

1. Power point presentation
2. Interactive lecture
3. AHA BLS ACLS course videos

TRAINING

1. Hands on training
2. AHA ‘Practice While Watching’ videos

EQUIPMENT

1. CPR manikins with AMBU bag mask and pocket mask
2. Airway manikins
3. Basic and advanced skill trainers
4. ALS manikin (advanced life support with arrhythmia trainer)
5. AED trainer & ECG simulator

WELCOME MESSAGE

On behalf of MGMIHS and the Organising Committee, it is my pleasure to invite you all for **EPICON 2019** (2nd to 5th February 2019) and **MAHAEM 2019** (6th February 2019), which are International and State Level conferences in Paediatric and Adult Emergency Medicine respectively. We welcome you all to the city of 21stcentury which has all amenities along with upcoming International Airport. Our venue's prime location and proximity to Navi Mumbai *Mahanagarpalika* (pillar-less architectural marvel), *Ashtavinayak* temples (Pali & Mahad), *Della* Resort & Adventure Park (Lonavla), *Adlabs Imagica* & amusement park (Khopoli), *N.D. Studio* (Karjat), *Zenith* waterfall (Khopoli) and *Pandavkada* (Kharghar) offer opportunities for leisure and travel as well. At EPICON and MAHAEM, the academic feast will be beneficial to everyone's practice and facilitate key updates in Emergency Paediatric and Adult Emergency Medicine. Embracing beyond our departmental motto *Save Life & Save Limb*, the program will be helpful in managing any emergency in any age group in any city or state or country. The event will strengthen the fraternity's bond between Paediatricians-Physicians-Surgeons and Consultants-Residents-Interns cutting across departments or hierarchies in the form of *Fellowship and Friendship*. We look forward for your presence to make this event a grand success!!!

CALL FOR ABSTRACTS

1. Abstracts may be submitted by email at **mgmepicon2019@gmail.com** latest by **15th January 2019.**
2. Abstracts may be submitted for paper or poster category.
3. The abstract should have: Title, Name and Designation of presenting author, Names and designations of Co-authors, Name of the Department and Institution, Contact details.
4. It should be structured as below for respective categories:
   a) Research/Study - Introduction, Objectives, Methods, Results, Conclusion/Take home message.
   b) Case Report - Introduction, Case Capsule, Discussion, Conclusion/Take home message.
5. It should be typed in Arial Narrow Font 12, with a maximum of 350 words.
6. The presenters will be informed of the Scientific Committee's decision by **25th January 2019.**
7. The selected abstracts will be published in the conference proceedings.
8. Registration for the conference is mandatory at time of submission and for inclusion of the abstract into the scientific program.
9. The Scientific Committee has the right to assign to the appropriate category as deemed fit.
10. Certificate of presentation will only be awarded to presenting author.

COURSE ON AIRWAY MANAGEMENT

MGM Institute of Health Sciences

Value added course

Course in Airway Management

Airway management includes a set of maneuvers and medical procedures performed to prevent and relieve airway obstruction. This ensures an open pathway for gas exchange between a patient's lungs and the atmosphere. This is accomplished by either clearing a previously obstructed airway; or by preventing airway obstruction in cases such as anaphylaxis, the obtunded patient, or medical sedation. Airway obstruction can be caused by the tongue, foreign objects, the tissues of the airway itself, and bodily fluids such as blood and gastric contents (aspiration).

Airway management is commonly divided into two categories: basic and advanced.

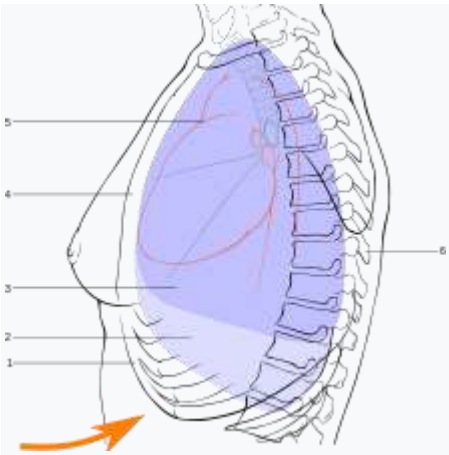
Basic techniques are generally non-invasive and do not require specialized medical equipment or advanced training. These include head and neck maneuvers to optimize ventilation, abdominal thrusts, and back blows.

Advanced techniques require specialized medical training and equipment, and are further categorized anatomically into supraglottic devices (such as oropharyngeal and nasopharyngeal airways), infraglottic techniques (such as tracheal intubation), and surgical methods (such as cricothyrotomy, and tracheotomy).

Airway management is a primary consideration in the fields of cardiopulmonary resuscitation, anaesthesia, emergency medicine, intensive care medicine, neonatology, and first aid. The "A" in the ABC treatment mnemonic is for airway.

Basic airway management involves maneuvers that do not require specialized medical equipment (in contrast to advanced airway management). It is mainly used in first aid since it is non-invasive, quick, and relatively simple to perform. The simplest way to determine if the airway is obstructed is by assessing whether the patient is able to speak.[1] Basic airway management can be divided into treatment and prevention of an obstruction in the airway.

Back slaps and abdominal thrusts are performed to relieve airway obstruction by foreign objects



Inward and upward force during abdominal thrusts

Treatment

Main article: Choking § Basic_treatment_(First-Aid)

Treatment includes different maneuvers that aim to remove the foreign body that is obstructing the airway. This type of obstruction most often occurs when someone is eating or drinking. Most modern protocols, including those of the American Heart Association, American Red Cross and the European Resuscitation Council, recommend several stages, designed to apply increasingly more pressure. Most protocols recommend first encouraging the victims to cough, and allowing them an opportunity to spontaneously clear the foreign body if they are coughing forcefully. If the person's airway continues to be blocked, more forceful maneuvers such as hard back slaps and abdominal thrusts (*Heimlich maneuver*) can be performed. Some guidelines recommend alternating between abdominal thrusts and back slaps while others recommend the same starting with the back slaps first. Having the person lean forward reduces the chances of the foreign body going back down the airway when coming up.

Performing abdominal thrusts on someone else involves standing behind them, and providing inward and upward forceful compressions in the upper abdomen, concretely in the area located between the chest and the belly button. The rescuer usually gives the compressions using a fist that is grasped with the other hand.

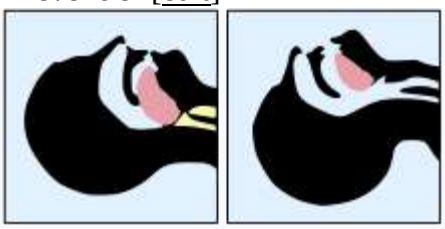
Abdominal thrusts can also be performed on oneself with the help of the objects near, for example: by leaning over a chair. Anyway, when the choking victim is oneself, one of the more reliable options is the usage of any specific anti-choking device. In adults, there is limited evidence that the head down position can be used for self-treatment of suffocation and appears to be an option only if other maneuvers do not work. In contrast, in children under 1 it is recommended that the child be placed in a head down position as this appears to help increase the effectiveness of back slaps and abdominal thrusts.

When the victim can not receive pressures on the abdomen (it can happens in case of pregnancy or excessive obesity, for example), chest thrusts are advised instead of abdominal thrusts. The chest thrusts are the same type of compressions, but applied on the lower half of the chest bone (not in the very extreme, which is a point named xiphoid process and could be broken).

The American Medical Association and Australian Resuscitation Council advocate sweeping the fingers across the back of the throat to attempt to dislodge airway obstructions, once the choking victim becomes unconscious. However, many modern protocols and literature recommend against the use of the finger sweep. If the person is conscious, they should be able to remove the foreign object themselves, and if they are unconscious, a finger sweep can cause

more harm. A finger sweep can push the foreign body further down the airway, making it harder to remove, or cause aspiration by inducing the person to vomit. Additionally, there is the potential for harm to the rescuer if they are unable to clearly see the oral cavity (for example, cutting a finger on jagged teeth).

Prevention[edit]



The head-tilt/chin-lift is the most reliable method of opening the airway.

The jaw thrust maneuver can also open up the airway with minimal spine manipulation

Prevention techniques focus on preventing airway obstruction by the tongue and reducing the likelihood of aspiration of stomach contents or blood. The head-tilt/chin-lift and jaw-thrust maneuvers are useful for the former while the recovery position is useful for the latter. If head-tilt/chin-lift and jaw-thrust maneuvers are performed with any objects in the airways it may dislodge them further down the airways and thereby cause more blockage and harder removal.

The head-tilt/chin-lift is the primary maneuver used in any patient in whom cervical spine injury is not a concern. This maneuver involves flexion of the neck and extension of the head at Atlanto-occipital joint (also called the sniffing position), which opens up the airway by lifting the tongue away from the back of the throat. Placing a folded towel behind the head accomplishes the same result.[4]

All forms of the recovery position share basic principles. The head is in a dependent position so that fluid can drain from the patient's airway; the chin is well up to keep the epiglottis opened. Arms and legs are locked to stabilize the position of the patient

The jaw-thrust maneuver is an effective airway technique, particularly in the patient in whom cervical spine injury is a concern. It is easiest when the patient is positioned supine. The practitioner places their index and middle fingers behind the angle of the mandible to physically push the posterior aspects of the mandible upwards while their thumbs push down on the chin to open the mouth. When the mandible is displaced forward, it pulls the tongue forward and prevents it from occluding the entrance to the trachea.[

The recovery position is an important prevention technique for an unconscious person that is breathing casually. This position entails having the person lie in a stable position on their side with the head in a dependent position so fluids do not drain down the airway, reducing the risk of aspiration.

Most airway maneuvers are associated with some movement of the cervical spine. When there is a possibility of cervical injury, collars are used to help hold the head in-line. Most of these airway maneuvers are associated with some movement of the cervical spine. Even though cervical collars can cause problems maintaining an airway and maintaining a blood pressure, it is not recommended to remove the collar without adequate personnel to manually hold the head in place.

Advanced airway management

Main article: Advanced airway management

In contrast to basic airway management maneuvers such as head-tilt or jaw-thrust, advanced airway management relies on the use of medical equipment. Advanced airway management can be performed "blindly" or with visualization of the glottis by using a laryngoscope. Advanced airway management is frequently performed in the critically injured, those with extensive pulmonary disease, or anesthetized patients to facilitate oxygenation and mechanical ventilation. Additionally, implementation of a cuffing system is used to prevent the possibility of asphyxiation or airway obstruction.

Many methods are used in Advanced airway management. Examples in increasing order of invasiveness include the use of supraglottic devices such as oropharyngeal or nasopharyngeal airways, infraglottic techniques such as tracheal intubation and finally surgical methods.

Removal of foreign objects]

Foreign objects can be removed with a Magill forceps under inspection of the airway with a laryngoscope

The ingestion and aspiration of foreign objects poses a common and dangerous problem in young children. It remains one of the leading cause of death in children under the age of 5. Common food items (baby carrots, peanuts, etc.) and household objects (coins, metals, etc.) may lodge in various levels of the airway tract and cause significant obstruction of the airway. Complete obstruction of the airway represents a medical emergency. During such crisis, caretakers may attempt back blows, abdominal thrust, or the Heimlich maneuver to dislodge the inhaled object and reestablish airflow into the lungs.

In the hospital setting, healthcare practitioners will make the diagnosis of foreign body aspiration from the medical history and physical exam findings. In some cases, providers will order chest radiographs, which may show signs of air-trapping in the affected lung. In advanced airway management, the inhaled foreign objects, however, are either removed by using a simple plastic suction device (such as a Yankauer suction tip) or under direct inspection

of the airway with a laryngoscope or bronchoscope. If removal is not possible, other surgical methods should be considered.

Supraglottic techniques

Supraglottic techniques use devices that are designed to have the distal tip resting above the level of the glottis when in its final seated position. Supraglottic devices ensure patency of the upper respiratory tract without entry into the trachea by bridging the oral and pharyngeal spaces There are many methods of subcategorizing this family of devices including route of insertion, absence or presence of a cuff, and anatomic location of the device's distal end. The most commonly used devices are laryngeal masks and supraglottic tubes, such as oropharyngeal (OPA) and nasopharyngeal airways (NPA). In general, features of an ideal supraglottic airway include the ability to bypass the upper airway, produce low airway resistance, allow both positive pressure as well as spontaneous ventilation, protect the respiratory tract from gastric and nasal secretions, be easily inserted by even a nonspecialist, produce high first-time insertion rate, remain in place once in seated position, minimize risk of aspiration, and produce minimal side effects[1]

A *nasopharyngeal airway* is a soft rubber or plastic tube that is passed through the nose and into the posterior pharynx. Nasopharyngeal airways are produced in various lengths and diameters to accommodate for gender and anatomical variations. Functionally, the device is gently inserted through a patient's nose after careful lubrication with a viscous lidocaine gel. Successful placement will facilitate spontaneous ventilation, masked ventilation, or machine assisted ventilation with a modified nasopharyngeal airway designed with special attachments at the proximal end. Patients generally tolerate NPAs very well. NPAs are preferred over OPAs when the patient's jaw is clenched or if the patient is semiconscious and cannot tolerate an OPA.[NPAs, however, are generally not recommended if there is suspicion of a fracture to the base of the skull. In these circumstances, insertion of the NPA can cause neurological damage by entering the cranium during placement. There is no consensus, however, regarding the risk of neurological damage secondary to a basilar skull fracture compared to hypoxia due to insufficient airway management. Other complications of Nasopharyngeal airways use includes laryngospasm, epistaxis, vomiting, and tissue necrosis with prolonged use.

Oropharyngeal airways in a range of sizes

Oropharyngeal airways are curved, rigid plastic devices, inserted into the patient's mouth. Oropharyngeal airways are produced in various lengths and diameters to accommodate for gender and anatomical variations. It is especially useful in patients with excessive tongue and other soft tissues. OPAs prevent airway obstruction by ensuring that the patient's tongue does not obstruct the epiglottis by creating a conduit. Because an oropharyngeal airway can mechanically stimulate the gag reflex, it should only be used in a deeply sedated or unresponsive patient to avoid vomiting and aspiration . Careful attention must be made while inserting an OPA. The user must avoid pushing the tongue further down the patient's throat.

This is usually done by inserting the OPA with its curve facing cephalad and rotating it 180 degrees as you enter the posterior pharynx.

Extraglottic devices are another family of supraglottic devices that are inserted through the mouth to sit on top of the larynx. Extraglottic devices are used in the majority of operative procedures performed under general anaesthesia.[28] Compared to a cuffed tracheal tube, extraglottic devices provide less protection against aspiration but are more easily inserted and causes less laryngeal trauma. Limitations of extraglottic devices arise in morbidly obese patients, lengthy surgical procedures, surgery involving the airways, laparoscopic procedures and others due to its bulkier design and inferior ability to prevent aspiration.[In these circumstances, endotracheal intubation is generally preferred. The most commonly used extraglottic device is the laryngeal mask airway (LMA). An LMA is a cuffed perilaryngeal sealer that is inserted into the mouth and set over the glottis. Once it is in its seated position, the cuff is inflated. Other variations include devices with oesophageal access ports, so that a separate tube can be inserted from the mouth to the stomach to decompress accumulated gases and drain liquid contents. Other variations of the device can have an endotracheal tube passed through the LMA and into the trachea.

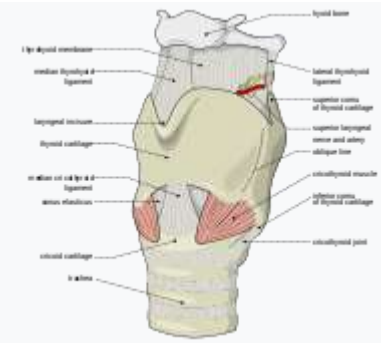
Infraglottic techniques

A cuffed endotracheal tube used in tracheal intubation

In contrast to supraglottic devices, infraglottic devices create a conduit between the mouth, passing through the glottis, and into the trachea. There are many infraglottic methods available and the chosen technique is reliant on the accessibility of medical equipment, competence of the clinician and the patient's injury or disease. Tracheal intubation, often simply referred to as intubation, is the placement of a flexible plastic or rubber tube into the trachea to maintain an open airway or to serve as a conduit through which to administer certain drugs. The most widely used route is orotracheal, in which an endotracheal tube is passed through the mouth and vocal apparatus into the trachea. In a nasotracheal procedure, an endotracheal tube is passed through the nose and vocal apparatus into the trachea. Alternatives to standard endotracheal tubes include laryngeal tube and combitube.

Surgical method

Main article: surgical airway management



In cricothyrotomy, the incision or puncture is made through the cricothyroid membrane in between the thyroid cartilage and the cricoid cartilage

Photograph of a tracheostomy tube

Surgical methods for airway management rely on making a surgical incision below the glottis in order to achieve direct access to the lower respiratory tract, bypassing the upper respiratory tract. Surgical airway management is often performed as a last resort in cases where orotracheal and nasotracheal intubation are impossible or contraindicated. Surgical airway management is also used when a person will need a mechanical ventilator for a longer period. Surgical methods for airway management include cricothyrotomy and tracheostomy

A cricothyrotomy is an emergency surgical procedure in which an incision is made through the cricothyroid membrane to establish a patent airway during certain life-threatening situations, such as airway obstruction by a foreign body, angioedema, or massive facial trauma. Cricothyrotomy is much easier and quicker to perform than tracheotomy, does not require manipulation of the cervical spine and is associated with fewer immediate complications.[1]Some complications of cricothyrotomy include bleeding, infection, and injury to surrounding skin and soft tissue structures.

A tracheotomy is a surgical procedure in which a surgeon makes incision in the neck and a breathing tube is inserted directly into the trachea. A common reason for performing a tracheotomy includes requiring to be put on a mechanical ventilator for a longer period.[-]The advantages of a tracheotomy include less risk of infection and damage to the trachea during the immediate post-surgical period. [1]Although rare, some long term complications of tracheotomies include tracheal stenosis and tracheoinnominate fistulal.

Microscope and Staining Techniques
[Conducted by Dept of Anatomy]

Light Microscopy: Eye of Medicine

The development of the microscope is tightly coupled with developments in cell biology and medicine. Microscopes provide the observer with enhanced resolution (ability to observe two nearby objects as distinct objects), contrast (ability to detect different regions of the specimen on thebasis of intensity or colour) and magnification (ability to make small objects visible). The human eye can resolve objects of the order of 0.1 mm, while the light microscope can resolve objects on the order of 0.2 mm (200 nm) with a magnification of 1000X.
The development of various types of optical microscopesincorporated the following components: microscope objectivesthat minimize chromatic and other optical aberrations (image distortion), stands that minimize mechanical vibrationsand sources of illumination from sunlight to lasers.
Additionally, there were new methods of fixing and cuttingspecimens (microtomes), specimen staining techniques (dyes, stains, molecular probes) that increase specimen contrast. Also important were the development of variousoptical methods that provide contrast (phase and differentialinterference microscopes, fluorescence microscopes) for live cells, techniques for imaging long-term live cell cultures (time-lapse and video-microscopy), optical techniques to provide optical sectioning of specimens (confocal microscopes), and nonlinear-optical imaging techniques (multiphoton, harmonic generation and coherent anti-Stokes Raman microscopes).

Staining methods:
Staining of slides is key to visualized slides. It helps in differentiating cells and tissue architecture. It has immense importance to identify normal from abnormal structures, cells and dysplastic tissue.
Standard tissue staining protocols evolved in 100 year of time. Which gives sharp and crispy images as well preserve tissue for years to come.
Acquiring skill also helps medical student to understand staining method and why particular tissue stains in peculiar colour and stain.

Digital microscope imaging
Although microscopy plays a very important role in biology and medicine, the observationis performed with the naked eye under the conventional optical microscopes. This can result in eye fatigue after a relatively long time of continuous observation. In addition, the image information cannot be stored and processed for different image enhancement purposes. Tosolve these limitations, digital microscopes have been developed and tested.

Uses of microscopy:

In today's healthcare we cannot imagine medicine without eye of microscope. Various uses of microscopy vary from histology, pathology, physiology, haematology, microbiology to structure of drug discoveries to immunohistochemistry, biochemistry etc.

Knowledge of cutting edge technology and use of microscope is an essential skill development in practice of medicine and its various branches.

To make aware and develop microscopy skill this course is added.

Fundamentals of Human Genetics

Introduction-

Genetics is not only genes but evolution of biology on Earth, evolution of mankind with the help of DNA. The master molecule DNA is simply the carbon, hydrogen, nitrogen and oxygen. But, the specific bonding amongst these elements has formed deoxynucleic acid (DNA) which has power to replicate, and has a blue print of every life in its own unique way. It won't be an overstatement, to say that 'it's a single fundamental element that defines life on earth'. The variations in the DNA sequence lead to specific characteristics which are normal but also can be disease causing.

Human genetics deals with study of chromosomes, DNA, RNA, proteins leading to inherited characteristics, which are physical, mental, normal and abnormal, in an individual, a family, a race or population.

The science of Genetics has progressed exponentially after human genome project in year 2003. We have mapped human genome which helps in understanding the genetic basis of characters, diseases and also helps in inventing new treatments for these diseases even at sub molecular level. We are on the brink of developing precision medicine, i.e. medicines based on genotype of particular individual. Gene therapy, Gene editing has already made success stories. As we are witnessing the next revolution in medicine as Genetics, it's imperative to provide knowledge, understanding, and application of genetics for human diseases. **The Fundamentals of Human Genetics course** will take all the students from basics to advances in Genetics and keep them updated about this filed which is going to have tremendous impact on medical practice in recent future.

Course outline - 16 hours course spread over 2 months, every Saturday, 2-4pm

1. An introduction to human Genetics
2. The cell cycle
3. Understanding the chromosomes
4. Understanding the DNA, RNA and basis of inheritance
5. Modes of inheritance
6. Chromosomal Diseases
7. Developmental Genetics/ embryogenesis and organogenesis/ Dysmorphology
8. Biochemical Genetics- Inborn errors of metabolism- small molecule and large molecule Diseases, Hemoglobinopathies
9. Cancer genetics
10. Laboratory Genetics- Cyto-genetic and molecular genetics techniques for investigations in

11. Genetic counseling
12. Genetic Screening.

Week 1-

A. Introduction 1. History of Medical Genetics 2. Genetic disorders- 1 hr
B. Understanding the DNA and replication,
C. Understanding transcription, translation, Gene
D. Genotype, phenotype and mutations

Week 2-

A. Genes in Pedigree- understanding terminologies.
B. Patterns of genetic inheritance- Mendelian and non Mendelian

Week 3-

A. Understanding the chromosomes
B. chromosomal diseases- numerical and structural

Week 4-

A. Cell Cycle, meiotic segregation ,Embryogenesis, organogenesis
B. Congenital Malformations

Week 5-

A. Biochemical Genetics-Inborn Errors of Metabolism- small molecule diseases
B. Large molecule Diseases

Week 6-

A. Hemoglobinopathies
B. Cancer Genetics

Week 7-

A. Laboratory Genetics-Cyto-Genetic and molecular Genetic diagnostic techniques
B. Laboratory Visit

Week 8-

A. Genetic Counselling
B. Genetic screening

One pre-test and one post-test (50 one word questions- answers) on above topics, following which certificates can be given for completion of "Fundamental of Human Genetics Course"

GUEST LECTURE ON PELVIC FLOOR REHABILITATION BY DR.SNIGDHA MEHTA MAM

MGM School of physiotherapy arranged a lecture on 22nd of September 2014 on the topic of pelvic floor rehabilitation in Dhanvantari Hall.

Pelvic floor rehabilitation is an approach to improving the strength and function of the muscles that support the bladder, urethra and other organs within the pelvis. These muscles, called the levator ani or the pelvic floor muscles, stretch from the pubic bone to the tailbone, creating the "floor" of the pelvis. The urethra, vagina and anus pass through small openings in this muscle group. The levator ani may be damaged or lose strength and tone due to aging, childbirth, surgery, illness or other conditions.

Pelvic floor rehabilitation uses the principles of physical therapy to provide a structured program for reconditioning these muscles. Our program is staffed by physical therapists who are specialized in urinary incontinence and pelvic organ prolapse.

GUEST LECTURE ON INTERNATIONAL CLASSIFICATION OF FUNCTIONING

Guest lecture was conducted by Dr. Apurv Shimpi Sir on on 14th September 2016 on international classification of functioning in the presence of Dr. Sarath Babu Sir and the other staff members.

The International Classification of Functioning, Disability and Health (ICF) is a framework for describing and organizing information on functioning and disability. It provides a standard language and a conceptual basis for the definition and measurement of health and disability. The ICF integrates the major models of disability. It recognizes the role of environmental factors in the creation of disability, as well as the relevance of associated health conditions and their effects.

This guest lecture is conducted in dyotan hall, MGM Medical College and Hospital, Aurangabad.

Student gain knowledge about international classification of functioning and learned a lot of things from Dr.Apurv Shimpi Sir These valuable information were highly applauded by the gatherings and took a home message for future practice.

GUEST LECTURE ON ASSESSMENT OF GERIATRIC PATIENT

Guest lecture is conducted by Dr.Satyam Bodhaji Sir on assessment of Geriatric patient on 13th December 2017 in the presence of Dr. Sarath Babu Sir and the other staff members.

The geriatric assessment is a multidimensional, multidisciplinary assessment designed to evaluate an older person's functional ability, physical health, cognition and mental health, and socioenvironmental circumstances. It is usually initiated when the physician identifies a potential problem.

A complete assessment is usually initiated when the physician detects a potential problem such as confusion, falls, immobility, or incontinence. However, older persons often do not present in a typical manner, and atypical responses to illness are common. These valuable information were highly applauded by the gatherings and took a home message for future practice.

BIOMECHANICAL CORRECTION BY BARRY GATES

A lecture was scheduled on Biomechanical correction by Barry Gates on 22nd October 2018.Biomechanical correction of the spine is carried out consecutively in lumbar, thoracic and cervical regions. Lumbar spine correction includes simultaneous mobilization of all blocked movement segments using our method of "backward rotation". Correction of the thoracic blockages is performed starting from upper regions to lower using special impulse techniques. Corrections of the cervical spine are performed using movement with complex trajectory to simultaneously influence all blocked segments.

These valuable information were highly applauded by the gatherings and took a home message for future practice.
