No.	Event Report
1.	Name & Level of Event – College/ Regional/ State/ National/ International. "International Convention on Challenges in Medical Education" [ICCME 2015, Aurangabad]. Date: Jan 09 – 11 Jan 2015 International Conference, organized by MGM Medical College, Aurangabad & MGMIHS, Navi Mumbai.
2.	Background/ Introduction – Need/ reasons for holding the prg, Name of Association/ Collaboration etc. <ul style="list-style-type: none"> Medical graduates of today (over 350 medical colleges churn out about 40,000 of them per year) face new challenges like a change of disease pattern in patients reporting to them, from Infectious to Non-infectious. Does the current medical education prepare them enough to face this emerging challenge? Do medical students utilize the clinical exposure to the maximum or are distracted in preparing for their PG? Our doctors are amongst the best in the world but we still have a very high infant and maternal mortality rate. How do we explain these contradictions? Do the above issues reflect lacunae's in training in our medical system? Do we as teachers instill a proper vision and mission in our students? Does the paradigm of today's Medical Education System need to be revised to address the above issues effectively? These are the burning issues that were identified and addressed in this International conference.
3.	Venue - Rukmini Auditorium, MGM Campus, MGM Medical College, Aurangabad

Essential Skills in Medical Education (ESME) workshop was conducted by prominent names in field of Medical Education, namely Dr Ronald Harden who introduced OSCE was the main faculty and speaker. Other prominent National and International faculties who acted as facilitators, with the themes and topics are given below:

Sr. No	Guest Speaker/ Facilitators*	Topic
Theme 1: What Should the Learner Learn? <i>Specifying & Using Learning Outcomes.</i>		
1	Robert Harden	Ideas about learning outcomes, reasons underpinning the approach and how learning outcomes can be specified and communicated. Some common myths.
2	Activity 1	Highlighting examples of key learning outcomes that might be addressed in a course – a case study
Theme 2: How can Learning be Organized in a Curriculum? <i>Curriculum Planning.</i>		
3	Robert Harden	What is curriculum? What are the educational strategies that should be considered? The SPICES Model
4	Activity 2	Consider how the six educational strategies can help you to tackle problems in medical education as described in the sheets relating to this activity.
Theme 3: How Should the Learner Learn the Best? <i>Making Learning more Effective.</i>		
5	Robert Harden	Some basic Principles: Be fair to the students.
6	Activity 3	Discuss the four Principles and think about how they are or might be applied to the case study. What are your conclusions?

* - Facilitators in all the 3 group activities were – John Dent, Nivritti Patil, Madalena Patricio, Pat Lilley.

Each theme was taken separately with an introduction to the same by Dr Robert Harden. This was followed by group activity where educational scenarios were given with appropriate reference materials. The groups interacted amongst themselves and were guided by the above mentioned facilitators. The group then shared their experiences/ conclusions and this was followed by further discussions. The final closing session was on "How do we know if the learner has learnt?"

7. Participants & Delegates – No of participants & delegates/ teams with their names.

Name of the Workshop: Essential of doctor patient communication skills

Date: 10th July 2014

Venue: lecture Hall 2, Ground floor Medical College,

Time: 10 am to 5 pm

Effective doctor-patient communication is a central clinical function in building a therapeutic doctor-patient relationship, which is the heart and art of medicine.

This is important in the delivery of high-quality health care. Much patient dissatisfaction and many complaints are due to breakdown in the doctor-patient relationship. However, many doctors tend to overestimate their ability in communication. The workshop was attended by 52 teaching faculties of different departments and institution of MGM Institute of Health Sciences.

Name of the workshop: Leadership and Management Skills

Date: 10th September 2014

Venue: lecture Hall 1, Ground floor Medical College,

Time: 10 am to 5 pm

MGM Medical college Navi Mumbai organized a session on Leadership and Management Skills required to overcome the personal psychological stress in a social context where sources of support are lacking and may reflect a wider absence of well-being and cohesion. The session was about Social cohesion, which is the fabric that binds people at multiple levels in a society – individuals, families, schools, neighborhoods, local communities, cultural groups and society as a whole. People who share close, personal and enduring relationships and values typically have a sense of purpose, security and connectedness at the work place and never have suicidal tendencies.

Guest Speaker Wg. Cdr. Sudhir Salunkhe, Dean I feel, Lonavala engaged the audience with activities and case studies. The workshop was attended by 64 teaching faculties of different departments and institution of MGM Institute of Health Sciences.

Name of the workshop: International Symposium on Advances in Biomedical Sciences

Organized by Biochemistry Department & Indian Academy of Biomedical Sciences at 3rd Floor Auditorium of MGMIHS, Navi Mumbai

Date: 31st January 2015

Time: 10 am to 5 pm

MGM Medical college Navi Mumbai organized an International Symposium on Advances in Biomedical Science. Biomedical sciences imply the application of biological principles, theories and innovations for the development of tools and techniques which find increased applications in medical treatment of diseases.

Biomedical sciences involve amalgamation of contemporary research development in varied scientific disciplines for the benefit of mankind. The branches of biomedical sciences include medical microbiology, physiology, pathology, epidemiology, hematology, clinical biochemistry, immunology, cytology, neurology, biomedical engineering, medical electronics, nuclear medicine, radiotherapy, etc. It follows a multidisciplinary approach and encompasses the application of scientific breakthroughs and technological interventions in the development of principles, methods, tools and techniques application in the medical and healthcare industry. The symposia were attended by 165 faculties and non teaching staff to understand the future of Biomedical Sciences.

Name of the workshop: SPORTS & EXERCISE MEDICINE (Live web stream from RCPE)

Organised by: Royal College of Physicians of Edinburgh

Date: 07 February 2015, Time: 10 am to 5 pm

Venue: MGM Medical College and Hospital, Kamothe, 2nd floor, seminar hall

MGM Medical college Navi Mumbai organized a Sport and exercise medicine. It became a recognised medical specialty in 2005. Alongside treating sport and physical activity related injuries and common conditions, it aims to increase physical activity both to reduce and treat many non-communicable diseases. The role includes:

- providing accurate diagnosis for individuals with musculoskeletal injuries or illness who would like to exercise, or for whom exercise would be beneficial
- overseeing and implementing rehabilitation programmes
- workplace wellness and vocational outputs
- making their clinical expertise available to other clinicians and allied healthcare professionals in the wider multi-disciplinary team
- providing support to sportsmen and women to assist them in maximising performance (within international rules), reducing injury time and minimising the co-morbidity associated with sporting participation
- promoting the highest level of ethical standards within sport by contributing to sporting organisations and teams
- promoting improvements in public health through encouraging physical activity and exercise in the general population
- developing and implementing public health policy for physical activity programmes
- liaising with and supporting the work of health authorities, sporting organisations and other community agencies involved in the promotion of healthy lifestyles and safety standards in sport.

Name of the workshop: Nuclear Medicine

Organized by Surgery Department in association with Western Chapter of Society of Nuclear Medicine

Date: 8th March 2015

Venue: 2nd Floor, MGM Hospital, Kamothe

Time: 10 am to 5 pm

MGM Medical College Navi Mumbai organized an nuclear medicine. Nuclear medicine imaging uses small amounts of radioactive materials called radiotracers that are typically injected into the bloodstream, inhaled or swallowed. The radiotracer travels through the area being examined and gives off energy in the form of gamma rays which are detected by a special camera and a computer to create images of the inside of your body.

Nuclear medicine imaging provides unique information that often cannot be obtained using other imaging procedures and offers the potential to identify disease in its earliest stages. The session was attended by 142 faculties and staff of MGM Medical college, Navi Mumbai.

Name of the workshop: CME on World TB day 2014

Community Medicine & Respiratory Medicine, MGM Medical College and Hospital, Navi Mumbai

Date 25th March 2015, Time: 10 am to 5 pm

Venue: Seminar Hall, 2nd floor, MGM Medical College and Hospital

MGM Medical College Navi Mumbai organized a world TB day. Each year, we commemorate World Tuberculosis (TB) Day on March 24 to raise public awareness about the devastating health, social and economic consequences of TB, and to step up efforts to end the global TB epidemic.

The date marks the day in 1882 when Dr Robert Koch announced that he had discovered the bacterium that causes TB, which opened the way towards diagnosing and curing this disease. The session was attended by 127 faculties and staff of MGM Medical college, Navi Mumbai. It was highlighted in the session that as health care providers, we need to develop awareness among society.

Name of the workshop: Ethics & Care For Older People Approaching the End of Life

(Live web stream from RCPE),

Date: 3rd April 2015

Venue: MGM Hospital, Kamothe, 2nd Floor,

Time: 10 am to 5 pm

MGM Medical College Navi Mumbai organized an ethics and care for older people. Ethics is a fundamental part of geriatrics. Ethics, or the provision of ethical care, refers to a framework or guideline for determining what is morally good (ie, right) or bad (ie, wrong).

Ethical problems arise when there is conflict about what is the "right" thing to do. This dilemma generally occurs when decisions need to be made whether or not a medical intervention should be implemented and whether or not the intervention is futile. The answers to ethical questions are not straightforward; they involve a complex integration of thoughts, feelings, beliefs, and evidence-based data. Ageism can play a strong role in these decisions. Acknowledging and acting on the wishes of the older individual are a critical component of ethical care.

Name of the workshop: Awareness Programme substance use disorder and Schizophrenia,

Organized by: Psychiatry Department, MGM Medical College, Navi Mumbai. MGM Hospital, Kamothe,

Venue: 2nd Floor, Seminar Hall

Date: 26th June 2015 Time: 10 am to 5 pm

MGM Medical college Navi Mumbai organized awareness program on substance use disorder and schizophrenia, which is a very serious and disruptive mental illness. Individuals diagnosed with this condition often struggle to manage symptoms, to live independently, and to cope with recurring episodes, even with good treatment. Often, one or more family members provide varying levels of support, from housing and money to managing treatments and medication. Caregiving is usually time-consuming and stressful and puts a big burden on individuals.

These caregivers need their own support, because caring for someone with severe mental illness takes its toll. Studies have found that caregivers struggle with several issues to a greater degree than those who do not care for a loved one with mental illness, including financial difficulties, physical health problems, disruption of routine and social life, stigma, stress, depression, and substance use. But caregivers of schizophrenia patients can take active steps to reduce this burden and enjoy a better quality of life.

Name of the workshop: Glaucoma & Retina Update,

Organised by: Department of Ophthalmology, MGM Medical College & Hospital, Navi Mumbai

Date: 24th August 2014

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

MGM Medical College Navi Mumbai organized anglaucoma and retina update. Over 60 million people worldwide are diagnosed with glaucomatous optic neuropathy, which is estimated to be responsible for 8.4 million cases of irreversible blindness globally. Glaucoma is associated with characteristic damage to the optic nerve and patterns of visual field loss which principally involves the loss of retinal ganglion cells (RGCs). At present, intraocular pressure (IOP) presents the only modifiable risk factor for glaucoma, although RGC and vision loss can continue in patients despite well-controlled IOP. This, coupled with the present inability to diagnose glaucoma until relatively late in the disease process, has led to intense investigations towards the development of novel techniques for the early diagnosis of disease. The session concludes by discussing techniques to assess glaucomatous changes in the brain using MRI and the clinical relevance of glaucomatous-associated changes in the visual centres of the brain.

Name of the workshop: New Age Psychiatry

Date: 8th October 2014

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

MGM Medical college Navi Mumbai organized an New age psychiatry. The history of psychiatry was written mainly by psychiatrists. The tale they told was of benign progress: psychiatry was becoming progressively more humane as clinicians developed more and more effective treatments.

This type of approach tended to adopt the 'Great Man' theory of history. Changes were seen as being brought about by the actions of eminent individuals and the wider social, cultural and political context was ignored. This kind of history was seen by non-medical people as complacent, self-congratulatory and serving to legitimise psychiatry's present. It was hoped by psychiatrists that historians would be interested in a dialogue with clinicians, as they had firsthand knowledge of the world of psychiatry. They encountered the mentally ill on a daily basis and they represented a potentially rich source of oral history.

There was also the hope that a dialogue with psychiatrists might serve to demystify them: historians would see that psychiatrists were perfectly ordinary people and not the ogres of mythology. The session was engaging and thought provoking and attended by 26 faculties of MGM Medical College, Navi Mumbai.

Name of the workshop: The XIII National Conference of Growth, Development & Behavior paediatric,

Conducted by: Paediatrics Department, MGM Medical College, Navi Mumbai & IAP Raigad & District Branch.

Date: 5th December to 7th December 2014

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

MGM Medical college Navi Mumbai organized the XIII National conference of growth development and behavior pediatrics.

The session was based on Children at risk for abnormal growth patterns include those 95th percentile, respectively, for weight and/or height. The real value of growth assessment becomes evident over time; the different parameters form "growth curves" that can reveal sudden and/or unexpected changes in growth velocity, although the patient's actual measurements may still be in the normal range. Children who "fall off" their expected growth curves, especially when measurements cross two percentile lines, warrant further investigation into the cause of their decelerated growth. The session was attended by 154 faculties.

Name of the workshop: Bio medical waste management

Date: 17.10.14

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

The goals of biomedical waste treatment are to reduce or eliminate the waste's hazards, and usually to make the waste unrecognizable. Treatment should render the waste safe for subsequent handling and disposal. There are several treatment methods that can accomplish these goals. Biomedical waste is often incinerated. Biomedical waste is generated from biological and medical sources and activities, such as the diagnosis, prevention, or treatment of diseases. So it is important that MGM Medical College and Hospital staff should be trained for this training.

The session was about segregation of waste at source and safety measures to be adhered in the hospital.

Name of the workshop: Workshop on Chronic Obstructive Pulmonary Disease

Organised By: Respiratory Medicine

Date: 19th November 2014, Time: 10 am to 5 pm

Venue: Auditorium, 3rd floor MGMIHS

MGM Medical College Navi Mumbai organized a workshop on chronic obstructive pulmonary diseases. Chronic obstructive pulmonary disease (COPD) is a complex set of conditions with multiple risk factors, disease mechanisms, and clinical manifestations. These characteristics make primary prevention of COPD challenging. Semantic issues related to prevalent and incident disease (e.g., the use of specific cut points on a continuous range) should not derail development of primary prevention initiatives. Understanding risk factors early in life, whether specific to COPD or not, allows for study of interventions to optimize lung function at birth and to prolong the lung function plateau, potentially reducing the development of COPD. It is necessary to identify noninvasive ways to screen for early COPD in those at risk before progression to clinically significant disease. The session was very engaging for all who attended.

Name of the workshop: Workshop on Cardiology

Organised By: Department of Cardiology

Date: 29th November 2014

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

MGM Medical College Navi Mumbai organized a workshop on **Cardiology**. The practice of cardiology has become increasingly complex. Not only clinically but also management.

Advances in cardiology as well as improved understanding of perioperative needs of patients undergoing anesthesia and surgery have altered the environment in which the physician anesthesiologist practices. As a result of these changes, every physician anesthesiologist is expected to have the basic skills to manage the majority of medical emergencies occurring in the operating room, as well as provide cardio-respiratory resuscitation and emergency airway management in other settings. Most importantly, as a result of clinical demands on other specialists, the increasing surgical volume and an emphasis on patient safety, physician anesthesiologists are now expected to provide an increasing proportion of preoperative care and to serve as perioperative physicians in a number of settings.

Name of the workshop: Workshop on Hazards of Smoking

Organized By: Respiratory Medicine

Date: 8th December 2014

Venue: Seminar Hall, 2nd floor MGM hospital

Time: 10 am to 5 pm

MGM Medical College Navi Mumbai organized a workshop on hazard of smoking. Tobacco smoke is a toxic mix of more than 7,000 chemicals. Many are poisons. When these chemicals get deep into your body's tissues, they cause damage. Your body must fight to heal the damage each time you smoke. Over time, the damage can lead to disease.

The chemicals in tobacco smoke reach your lungs quickly when you inhale. What this new report shows is that these same poisonous chemicals reach every organ in your body. They go quickly from your lungs into your blood. Then the blood flows through your arteries. It carries the chemicals to tissues in all parts of your body.

Workshop on Global Perspectives on Medical Education and its Relevance to India

Organised By: Department of PSM

Date: 6.1.2015

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

MGM Medical College Navi Mumbai organized a workshop on Global Perspectives on Medical Education and its Relevance to India. The session was focused on challenges in medical education.

Medical education is at a crossroads. Facing challenges by science and technology as well as societal change, the curriculum is increasingly out of synch with new needs in teaching content and medical practice. The path to significant curricular reform is difficult because of a variety of factors, including deeply entrenched values, the natural resistance to change, and the accreditation process.

Indeed, even the very definition of what it means to be a professional is changing with profound implications for the future role of the physician and the sacrosanct doctor-patient relationship.

Name of the workshop: CME on Cardiology

Organised By: Department of Cardiology

Date: 3rd January 2015

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

In the continuation of Cardiology workshop the MGM Medical College Navi Mumbai organized a workshop on cardiology again to highlight leading cause of death in the next 20 years in India due to stress and sedentary life style. There is a need, however, to identify areas that need more research. The importance of prevention will be highlighted because there is abundant evidence that IHD is largely preventable (for both sexes).

Differences between men and women pertaining to prevention, diagnosis and management will also be discussed. Nevertheless, the emphasis is that established clinical guidelines are applicable to both men and women. The session was attended by 38 faculties of MGM medical College, Navi Mumbai.

Name of the workshop: Ophthalmology Update

Organised By: Department of Ophthalmology

Date: 18th March 2015

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized a workshop on Ophthalmology update. The session highlights:

- Ranibizumab and aflibercept, used to treat vision loss from diabetic macular edema, and approximately 20 to 30 times more expensive than bevacizumab, are not cost-effective for treatment of DME compared to bevacizumab unless their prices decrease substantially, according to a study published online by JAMA Ophthalmology.
- The anti-vascular endothelial growth factor drugs have revolutionized DME treatment. A recent randomized clinical trial comparing anti-VEGF agents for patients with decreased vision from DME found that at one year aflibercept (2 mg) achieved better visual outcomes than repackaged (compounded) bevacizumab (1.25 mg) or ranibizumab (0.3 mg); the worse the starting vision, the greater the treatment benefit with aflibercept.

The session was attended by 76 faculties.

Name of the workshop: Critical Care Management

Organised By: Department of Emergency Medicine

Date: 28th March 2015

Venue: Seminar Hall, 2nd floor MGM Medical College and Hospital

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized a workshop on critical care management. Critical care management to treat severe conditions include rapid assessment, timely provision of appropriate interventions, and prompt transportation to the nearest appropriate health facility by the best possible means to enhance survival, control morbidity, and prevent disability.

The goal of effective critical care management is to provide emergency medical care to all who need it. Advances in medical care and technology in recent decades have expanded the parameters of what had been the traditional domain of emergency services. These services, no longer limited to actual in-hospital treatment from arrival to stabilization, now include prehospital care and transportation.

Name of the workshop: An Update on Swine Flu

Organised By: Respiratory Medicine

Date: 2nd April 2015

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized an update on swine flu. Swine origin influenza was first recognized in the border area of Mexico and United States in April 2009 and during a short span of two months became the first pandemic. The currently circulating strain of swine origin influenza virus of the H1N1 strain has undergone triple assortment and contains genes from the avian, swine and human viruses.

The workshop highlighted about its transmittal by droplets or fomites. Incubation period is 2 to 7 days. Common clinical symptoms are indistinguishable by any viral respiratory illness, and include fever, cough, sore throat and myalgia. A feature seen more frequently with swine origin influenza is GI upset. Less than 10% of patients require hospitalization. Patients at risk of developing severe disease are – younger than five years, elderly, pregnant women, with chronic systemic illnesses, adolescents on aspirin.

Of the severe manifestations of swine origin influenza, pneumonia and respiratory failure are the most common. Unusual symptoms reported are conjunctivitis, parotitis, hemophagocytic syndrome. Infants may present with fever and lethargy with no respiratory symptoms. Diagnosis is based on RT PCR, Viral culture or increasing neutralizing antibodies. Principle of treatment consists of isolation, universal precautions, good infection control practices, supportive care and use of antiviral drugs.

Name of the workshop: Workshop on Sleep Disorder for EEG and Sleep Technologist

Organised By: Department of Neurology

Date: 11th January 2015

Venue: Seminar Hall, 2nd floor MGM Medical College and Hospital

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized a workshop on Sleep Disorder for EEG and Sleep Technologist.

Sleep disorder "has become one of the most serious health issues mostly as a "silent killer" as it can cause heart disease, high blood pressure, chest pain, and an irregular heartbeat. It results into hair loss infertility problems and reduce sperm count etc. Researchers have found that sleep disorder worsens weight gain too.

Name of the workshop: Workshop on Census 2011; Data Dissemination

Organised By: Department of PSM

Date: 18th March 2015

Venue: Auditorium, 3rd floor MGMIHS

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized Workshop on Census 2011; Data Dissemination. Every successful organization is aware that providing employees with continual opportunities to learn is far more beneficial than offering training programs once in a blue moon. Delivering online training programs has become the norm in many organizations. Some have progressed beyond that, and want to deliver a hybrid learning experience to their employees in the form of an online library. Organizations that have enabled e-learning at the workplace already have a *Learning Management System* (LMS) in place. They only have to leverage the strengths of the data and its uses. The current workshop was about data dissemination with the help of LMS to build both soft skills and technical training, relevant to employees in the healthcare industry.

Name of the workshop: Fire and disaster preparation

Organised By: MGM Medical College and Hospital

Date: 15th March 2015

Venue: Seminar Hall, 2nd Floor, MGM Medical College and Hospital

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized a fire and disaster preparation. Most disasters are natural disasters, the result of some force of nature, such as tornadoes, wildfires, hurricanes, and floods. Some natural disasters can be predicted, such as hurricanes and severe winter storms, while others, such as tornadoes and earthquakes, happen with little or no warning. Some disasters are the cause of human actions, intentional or unintentional. A disaster plan will help with safety, security, and comfort.

Name of the workshop: "World Environmental Day"

Organised By: MGM Institute of Health Sciences

Date: 5th June 2015, Time: 10 am to 5 pm

Venue: Auditorium, 3rd floor MGMIHS

The MGM Medical College Navi Mumbai organized a workshop on **World Environment Day (WED)**. It is celebrated on 5 June every year, and is the United Nation's principal vehicle for encouraging awareness and action for the protection of our environment. First held in 1974, it has been a flagship campaign for raising awareness on emerging environmental issues to marine pollution, human overpopulation, and global warming, to sustainable consumption and wildlife crime.

World Environment Day has grown to become a global platform for public outreach, with participation from over 143 countries annually. Each year, WED has a new theme that major corporations, NGOs, communities, governments and all celebrities worldwide adopt to advocate environmental causes. Therefore, MEU of MGM Medical College Navi Mumbai also took this as an opportunity for celebrating the day for awareness.

Name of the workshop: Schizophrenia Caregivers Program

Organised By: Department of Surgery

Date: 6th October 2014

Venue: Seminar Hall, 2nd floor, MGM Medical College and Hospital

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized a workshop on Schizophrenia Caregivers program. Givers of schizophrenia patients are often family members who are not trained in mental health.

These individuals provide important support for their loved ones, but in doing so are susceptible to depression, stress, physical health problems, the burden of stigma, and a reduced social life. The overall quality of life for someone caring for a family member with severe mental illness suffers, but there are ways to get schizophrenia caregiver support. These include individual therapy, support groups, family education programs, and simply taking guilt-free time to take care of one's own needs.

Name of the workshop: Universal safety precautions

Organised By: Department of Quality of MGM Medical College and Hospital

Date: 06.08.2014

Venue: Seminar Hall, 2nd floor MGM Medical College and Hospital

Time: 10 am to 5 pm

The MGM Medical College Navi Mumbai organized a workshop on Universal safety precaution. **Universal precautions** refers to the practice, in medicine, of avoiding contact with patients' bodily fluids, by means of the wearing of nonporous articles such as medical gloves, goggles, and face shields.

The practice was introduced in 1985–88 In 1987, the practice of universal precautions was adjusted by a set of rules known as body substance isolation. In 1996, both practices were replaced by the latest approach known as standard precautions. Use of personal protective equipment is now recommended in all health settings.

Medical Education Unit (MEU)

Report of Training in 'E-learning' conducted for Faculties of MGM Medical College, Navi-Mumbai in the year 2014- 2015

E-learning has been demonstrated to be as effective as conventional didacticism and can be used to foster self-directed learning. It encourages medical students and teachers to exert greater control over their learning by allowing flexibility over content and pace.

Keeping this in mind, the following E-learning training programs were conducted for Faculties of MGM Medical College, Navi-Mumbai, during the year 2014-15. Faculties were trained in "Appropriate use of Media, Massive open online courses (MOOC)".

Sr. No.	Dates of Training Program	Faculty training in E-learning - Topic	Resource person	No. of participants
1	14/3/2015	Appropriate use of Media, Massive open online courses (MOOC)	Dr. Seema Anjenaya & Dr. Rita Khadkikar	45
2	19/3/2015			40
3	28/3/2015			37
4	3/9/2014			43
5	4/9/2014			48

The Faculties actively participated in the training program.

Dr. Seema Anjenaya

Workshop on Embalming

A session was conducted on "Embalming" on 10th July 2014. by MGM -Medical College, Kamothe Navi Mumbai, Embalming is the art and science of preserving human or animal remains by treating them (in its modern form with chemicals) to forestall decomposition.

The intention is usually to make the deceased suitable for public or private viewing as part of the funeral ceremony, or keep them preserved for medical purposes in an anatomical laboratory. The three goals of embalming are sanitization, presentation, and preservation, with restoration being an important additional factor in some instances.

Performed successfully, embalming can help preserve the body for duration of many years. Embalming has a very long and cross-cultural history, with many cultures giving the embalming processes a greater religious meaning the session was attended by 2 participants.

Museum Specimen Mounting

A session was conducted on Museum Specimen Mounting on 10th September 2014. by MGM -Medical College, Kamothe, Navi Mumbai, attended by 2 participants.

The session was on detail study of Making of a good museum specimen it involves meticulous planning at the time of biopsy, grossing and careful handling thereafter. Oral lesions vary widely in their gross presentations, color, texture, pattern of growth and are relatively smaller and more fragile. Crafting a museum specimen requires a more skilled workmanship and flexible material to work with. We describe here the institutional experience of the use of translucent materials readily available in any histo-pathological laboratory combined with routine stationery in displaying a specimen to its optimal elegance.

Museum specimens are generally mounted in glass jars or Perspex boxes using center plates or glass rods to which the specimen is fixed or sutured. Use of Perspex sheets as a center plate requires the use of power tools (saw, drills, vice etc.), which in turn require time and skill to produce good results. A more feasible alternative would be polyethylene terephthalate (PET, PETE or polyester) that is commonly used for carbonated beverage and water bottles. PET provides sufficient alcohol and essential oil barrier properties, generally good chemical resistance (although acetones and ketones will attack PET) and a high degree of impact resistance and tensile strength. These bottles are translucent, thin and inert, and can easily be cut with scissors or a blade in order to adapt properly to the size of the jar. PET sheets can be easily cut, sutured to the specimens (multiple if needed) and does not visually hinder the display. For a smaller jar, a hinge-like preparation of these plastic bottles gives a stable support to the specimen .

Sterilization and disinfection 1

A session was conducted on "Sterilization and disinfection 1" on 6th October 2014, by MGM -Medical College kamothe Navi Mumbai, attended by 1 participant.

Healthcare-associated infections (HAIs) are infections caused by a wide variety of common and unusual bacteria, mycobacteria, fungi, and viruses during the course of receiving medical care. Medical advances have brought lifesaving care to patients in need, yet many of those advances come with a risk of HAI. Overall there are an estimated 1.7 million HAIs each year in the United States that cost an estimated \$40 billion. These infections related to medical care can be devastating and even deadly. As our ability to prevent HAIs grows, these infections are increasingly unacceptable. Wherever patient care is provided, strict adherence to evidence-based infection prevention guidelines is essential to ensure that all care is safe care.

Achieving disinfection and sterilization through the use of disinfectants and sterilization practices is essential for ensuring that medical and surgical instruments do not transmit infectious pathogens to patients. Because it is unnecessary to sterilize all patient-care items, healthcare policies must identify whether cleaning, disinfection, or sterilization is indicated based primarily on the items' intended use. The information given in this session was to assist health care professionals in their judicious selection and proper use of disinfection and sterilization processes and help move health care systems toward elimination of HAIs associated with medical and surgical instruments. It is based on well-designed studies assessing the efficacy (via laboratory investigations) and effectiveness (via clinical studies) of disinfection and sterilization procedures.

Sterilization and disinfection 2

A session was conducted on "Sterilization and disinfection 2" on 8th October 2014. By MGM -Medical College kamothe Navi Mumbai, Maharashtra attended by 1 participant.

The information given in this session was to assist health care professionals in their judicious selection and proper use of disinfection and sterilization processes and help move health care systems toward elimination of HAIs associated with medical and surgical instruments. It is based on well-designed studies assessing the efficacy (via laboratory investigations) and effectiveness (via clinical studies) of disinfection and sterilization procedures

Healthcare-associated infections (HAIs) are infections caused by a wide variety of common and unusual bacteria, mycobacterium, fungi, and viruses during the course of receiving medical care. Medical advances have brought lifesaving care to patients in need, yet many of those advances come with a risk of HAI. Overall there are an estimated 1.7 million HAIs each year in the United States that cost an estimated \$40 billion. These infections related to medical care can be devastating and even deadly. Each year in the United States there are 46 million procedures performed on hospital inpatients and an estimated 53.3 million surgical and nonsurgical procedures performed during ambulatory surgery visits. For example, there are at least 10 million gastrointestinal endoscopies per year. Each of these procedures involves contact by a medical device or surgical instrument with a patient's sterile tissue or mucous membranes. A major risk of all such procedures is the introduction of infection. Failure to properly disinfect or sterilize equipment carries not only the risk associated with breach of the host barriers but the additional risk of person-to-person transmission (e.g., hepatitis B virus) and transmission of pathogens that contaminate the environment (e.g., *Clostridium difficile*).

Culture method for all specimens

A session was conducted on "Culture method for all specimen" on 29th December 2014. By MGM –

Medical College kamothe Navi Mumbai, Maharashtra attended by 1 participant.

Microbial cultures are used to determine the type of organism, its abundance in the sample being tested, or both. It is one of the primary diagnostic methods of microbiology and used as a tool to determine the cause of infectious disease by letting the agent multiply in a predetermined medium. For example, a throat culture is taken by scraping the lining of tissue in the back of the throat and blotting the sample into a medium to be able to screen for harmful microorganisms, such as *Streptococcus pyogenes*, the causative agent of strep throat. Furthermore, the term culture is more generally used informally to refer to "selectively growing" a specific kind of microorganism in the lab.

It is often essential to isolate a pure culture of microorganisms. A pure (or *axenic*) culture is a population of cells or multicellular organisms growing in the absence of other species or types. A pure culture may originate from a single cell or single organism, in which case the cells are genetic clones of one another. For the purpose of gelling the microbial culture, the medium of agarose gel (agar) is used. Agar is a gelatinous substance derived from seaweed. A cheap substitute for agar is guar gum, which can be used for the isolation and maintenance of thermophiles.

Microbial culture collections focus on the acquisition, authentication, production, preservation, cataloguing and distribution of viable cultures of standard reference microorganisms, cell lines and other materials for research in microbial systematic. Culture collections are also repositories of type strains.

ANTIBIOTIC SENSITIVITY TESTING

A session was conducted on "Antibiotic Sensitivity testing" on 31st January 2015 By MGM Medical College & Hospital, Navi Mumbai, attended by 1 participant.

An antibiotic sensitivity test is also known as an Antibiotic Susceptibility Test. It is conducted to find out the most effective antibiotic to combat certain bacteria in the human body. The genetic material in different bacteria varies. Some are more resistant to certain antibiotics. Some fungi or bacteria become resistant to certain drugs if a dose is not completed. If the bacteria are resistant to antibiotics taken by a patient, it's known as Intrinsic Resistance. The fungi or bacteria can mutate and develop resistance to an antibiotic that previously tackled it. This condition is called *Acquired Resistance*. The bacteria are got from a wound, urine or blood culture if it is found to be having more pathogens than one. The session covered the following topics:

- Why is It Important to Conduct Antibiotic Sensitivity Tests?
- Antibiotic Sensitivity Test Procedure- [Quantitative Tests Dilution Tests Disk Diffusion Test Qualitative Tests Automated Sensitivity Tests Molecular Testing]
- Antibiotic Sensitivity Test Results
- Antibiotic Sensitivity Test Results Interpretation

INTERNATIONAL SYMPOSIUM ON ADVANCES IN BIOMEDICAL SCIENCES

An "International Symposium on Advances in Biomedical Sciences" was Organized by Biochemistry Department & Indian Academy of Biomedical Sciences on 31st January 2015. MGM -Medical College kamothe Navi Mumbai, attended by 6 participants served as an appropriate venue to discuss and share the latest developments and scientific advances in biomedical, environmental health and public health.

This scientific conference continues to attract biomedical, environmental health and public health scientists and engineers who are at the forefront of research and innovation in the exciting field of environmental health, and who are dedicated to providing a scientific basis for informed decision-making regarding the cost-effective control and/or prevention of environmental hazards and environmentally-induced diseases.

It also offered excellent opportunities for networking, sharing ideas, and sustaining and/or establishing new research collaborations and partnerships.

IDENTIFICATION METHODS FOR BIOCHEMICALS

A session was conducted on "Identification Methods for Biochemical's "on 7th march at. MGM -Medical College kamothe Navi Mumbai, attended by 1 participants.

A series of biochemical methods using heavy suspensions of organisms and chemically-were explained and described; they included fermentations, reduction of nitrate and of methylene blue, production of indole, hydrogen sulphide and acetoin, and hydrolysis of gelatin, starch and urea.

The tests use the preformed enzymes of the bacterial cells and the results are not complicated by side effects or the multiple reactions that occur in cultures growing in a nutrient medium containing the test substrate. Challenges in Bacterial **Identification** Traditional **methods** of bacterial **identification** rely on phenotypic **identification** of the causative organism

SPORTS & EXERCISE MEDICINE

A session was conducted on "SPORTS & EXERCISE MEDICINE (Live web stream from RCPE)
Venue: MGMUniversityHospital , Kamothe , 2nd floor, seminar hall, Royal College of Physicians of Edinburgh MGM Medical College, Navi Mumbai & IAP Raigad & District Branch on 07 February 2015 attended by 5 participants.

Emerging and novel concepts, a new generation of trainees untrammelled by history and the overwhelming desire for SEM to take its place amongst the panoply of mainstream specialties all help drive the evolution of the specialty in new directions. The fact that this emerging discipline is not organ, system or disease specific both allows these possibilities and creates some of the very real dangers that threaten the existence of the specialty. It is a brave experiment by the health bureaucrats in different countries where the core competency of individual SEM practitioners will reflect these disparate views of just what the scope of SEM entails. With the various models of SEM training that exist in different countries, there is a brief window for harmonisation of skills and training that will rapidly pass. The risk is that SEM practitioners will have little in the way of "transportable" skills given the widely differing models of practice in different countries. The broader public health engagement of SEM practitioners to promote health and prevent disease at a population level remains difficult to judge at this time. The UK Department of Health recognised this role as one of the key reasons for the recognition of SEM as a specialty. Given the relatively small numbers of SEM physicians, the limited training of SEM practitioners in public health medicine (when compared to existing public health practitioners) coupled with the lack of SEM specific representation at a policy level, it remains to be seen whether this promise will be ultimately fulfilled.

Current day clinicians need to be clear that this process of SEM governance serves their view of the specialty correctly. Governing councils and faculties should reflect clinical SEM rather than the view of SEM that other specialties and civil servants think should be in place. It is a very real danger that we could finish up training public health physicians with little in the way of SEM competency rather than what we need, which is SEM specialists with competency in public health medicine.

USE OF BIO SAFETY CABINET & MAINTENANCE

A session was conducted on "Use of bio safety cabinet & maintenance" 7th march 2014. At MGM - Medical College kamothe Navi Mumbai, attended by 1 participants. Attended by 1 participant

Biosafety cabinets are used on a daily basis for hours. Besides protection of user and sample material, the human design factors (ergonomics) of the work become more and more important. This includes reduction of the noise level (for a more convenient working atmosphere), a height adjustable stand or stool (for optimized sitting position), panorama side windows (more light within cabinet), 10° angled front sash (enables better sitting position) as well as strong light sources (better view within cabinet) to improve the working conditions. The primary purpose of a BSC is to serve as a means to protect the laboratory worker and the surrounding environment from pathogens. All exhaust air is HEPA-filtered as it exits the biosafety cabinet, removing harmful bacteria and viruses. This is in contrast to a laminar flow clean bench, which blows unfiltered exhaust air towards the user and is not safe for work with pathogenic agents. Neither are most BSCs safe for use as fume hoods. Likewise, a fume hood fails to provide the environmental protection that HEPA filtration in a BSC would provide. However, most classes of BSCs have a secondary purpose to maintain the sterility of materials inside (the "product").

Biological Safety Cabinets are generally required to comply with that country or regions standards, this requirement may be governed by an institutional body such as the TGA, FDA or WHO. Within Australia, for example, the Class II BSC is required to meet construction standards entitled AS2252.2, the document references several other standards such as AS2243.3 (safety in laboratories), that classifies the level of risk that microorganisms pose, based on their pathogenicity, mode of transition and host range along with the current preventative measures and effective treatments

NUCLEAR MEDICINE

A session was conducted on "Nuclear Medicine" was organized by Surgery Department in association with Western Chapter of Society of Nuclear Medicine (India) in Conference Hall, 2nd Floor, MGM Hospital, Kamothe by MGM -Medical College kamothe Navi Mumbai, attended on 8th march 2015 attended 6 participants.

Nuclear Medicine is the speciality that utilises unsealed radioisotopes in the form of radio-pharmaceuticals to investigate disorders of anatomy, physiology and patho-physiology for diagnosis and/or treatment of diseases. Nuclear Medicine procedures are used for diagnosis/treatment of many types of cancers, cardiac disease, endocrine & neurological disorders etc. Nuclear medicine imaging has special importance as it can detect the molecular level activity within the body which helps in identification of disease in its earliest stage and the metastasis growth in cancer. In Nuclear Medicine procedure, the radio-pharmaceutical is injected in to blood stream or swallowed by the patient. The physiological nature of area being examined allows the accumulation of radio-pharmaceutical at the examination area. For diagnosis purpose, the gamma rays emitted from the radio isotope are detected by special detection devices (e.g. Gamma Camera, SPECT, PET) and images are reconstructed using computer algorithms. Radioisotopes such as Tc-99m, F-18, Tl-201, Ga-67 and Ga-68 are commonly used for diagnostic purpose. For therapeutic purpose, beta emitting radioisotopes are used which deliver localised radiation dose once radio-pharmaceutical accumulates at the area of interest. Radioisotopes such as I-131, Lu-177, Sm-153, Y-90, P-32 and Re-188 are commonly used for therapy. Radioisotopes in unsealed form used to carry out diagnostic and therapeutic operations in nuclear medicine practices have a potential for radiation contamination and exposure. Therefore, adequate care in ensuring safe handling of radioisotopes is required to be taken while carrying out Nuclear Medicine procedures.

FIRE SAFETY TRAINING, ADMINISTRATIVE STAFF

A session was conducted on "Fire Safety Training, Administrative Staff" on 3rd April 2015 by MGM -Medical College kamothe Navi Mumbai, Maharashtra attended by 2 participants.

The training for fire safety training was to:

- To get fire safety training certificate
- confidently use a fire extinguisher
- take the correct action when you find a fire or hear an alarm
- choose the right type of fire extinguisher for your workplace
- make sure your workplace meets workplace fire safety law

On this fire safety training learning was about fire prevention, evacuation, practical fire fighting skills and much more, including hands-on practice with different types of fire extinguishers.

TALLY SOFTWARE

A session was conducted on "Tally Software" on 27th to 30th April 2015 and 26th June 2015 by MGM - Medical College kamothe Navi Mumbai, attended by 5 participants.

Tally is an ERP accounting software package used for recording day to day business data of a company. The latest version of Tally is Tally ERP 9. Tally ERP 9 Software is one acclaimed financial accounting system and inventory management system with power computer. Tally ERP 9 is one best accounting software that can be integrated with other business applications such as Sales, finance, Purchasing, Payroll, Inventory, etc. Tally software stores all the business transactions of each account in detail. Tally ERP 9 follows double entry accounting system and hence eliminates and rectifies possible errors.

The session covered following outlines:

1. Features of Tally
2. Advantages of Tally ERP 9
3. How to Buy Tally ERP 9
4. How to download Tally ERP 9 Software
5. How to Install Tally ERP 9 Software on Windows computer
6. How to start Tally ERP 9
7. How to Close/ Quit Tally ERP 9
8. Tally Screen Components
9. Complete details of Tally Screen Components
10. Configurations in Tally ERP 9
11. Accounting features in Tally
12. How to open Accounting Features

CME ON WORLD TB DAY

A session was conducted on "CME on World TB day 2014, "on 25th March 2015 by MGM -Medical College kamothe Navi Mumbai, attended by 6 participants.

This conference was designed to provide practical, clinical information to physicians, mid-level providers, nurses, epidemiologists, public health and infectious disease specialists, and other health care providers who are responsible for the management and care of patients with tuberculosis. To build public awareness about the global epidemic of tuberculosis (TB) and efforts to eliminate the disease. In 2012, 8.6 million people fell ill with TB, and 1.3 million died from the disease, mostly in low and middle-income countries.

Ethics & Care For Older People Approaching the End of Life (Live web stream from RCPE),

A session was conducted on "Ethics & Care For Older People Approaching the End of Life (Live web stream from RCPE), MGM Hospital, Kamothe, 2nd Floor, Seminar Hall by MGM -Medical College kamothe Navi Mumbai, 3rd April 2015 attended by 3 participants.

The care of patients approaching the end of life is once again a controversial and high profile topic. The provision of high quality care to older patients with complex health and social care needs brings a unique set of clinical and ethical challenges. Lectures and interactive case discussions covered symptom control in chronic pain, vertebral fracture and advanced heart failure; ways of delivering advance care planning for older people in the community; ethical decision making in advanced dementia, around nutrition at the end of life, and around escalation of care. Lecture considered how we can deliver high-quality end of life care across the health service in the post-Liverpool Care Pathway era. A series of interactive cases was shown for exploration of practical approaches to ethical dilemmas at the end of life.

Attendees improved their knowledge of symptom control in difficult conditions, improve their decision-making in challenging ethical situations including advanced dementia, and will gain perspective on the recent debate regarding the optimal organisation and delivery of end of life care in the hospital and community.

Awareness Programme substance use disorder and Schizophrenia

A session was conducted on "Awareness Programme substance use disorder and Schizophrenia, Organized by Psychiatry Department, MGM Medical College, Navi Mumbai. MGM Hospital, Kamothe, 2nd Floor, Seminar Hall 26th June 2015 attended by 5 participants.

The co morbidity of schizophrenia and substance abuse has attracted increasing attention in the past years, with multiple potential links, including genetic vulnerability, neurobiological aspects, side effects of medications, and psychosocial factors being under discussion. The link between the use of substances and the development of psychoses is demonstrated by the high prevalence of substance abuse in schizophrenia. Apart from alcohol misuse, substances commonly abused in this patient group include nicotine, cocaine, and cannabis. In particular, heavy cannabis abuse has been reported to be a stressor eliciting relapse in schizophrenic patients. In general, substance use in psychosis is associated with poorer outcomes, including increased psychotic symptoms and poorer treatment compliance. Since both disorders have been observed to be closely interdependent, a particular treatment for schizophrenic patients with co morbidity of substance abuse is needed in order to provide more effective care. In this article, we discuss various potential modes of interaction and interdependence, and the possibility of embarking on new therapeutic paths for treating this particular population.

It has been determined that, schizophrenic patients with co-occurring substance misuse disorders are vulnerable to an increased risk of illness and injury, poorer outcomes in psychosis, and higher rates of presentation to inpatient and emergency services. Another tremendous problem involves the high occurrence of incarceration among persons with a diagnosis of schizophrenia, who abuse substances and lack stable housing. Even though the vulnerability of persons with schizophrenia to substance abuse has been emphasized, the degree of risk and adverse consequences diversify across various studies.

GLAUCOMA & RETINA UPDATE

A session was conducted on "Glaucoma & Retina Update, Department of Ophthalmology, MGM Medical College & Hospital, Navi Mumbai on 24th August 2014 attended by 3 participants.

The Glaucoma Update discussed current and developing glaucoma imaging and testing modalities. The talks were directed towards both comprehensive ophthalmologists and glaucoma specialists and provided guidance for testing and treatment of their patients. A panel discussion was done to discuss challenging cases.

At the conclusion of this conference, participants were able to:

- Review and assess various glaucoma diagnostic tests
- Apply newer glaucoma testing procedures in glaucoma patient care
- Learn how to manage complex glaucoma cases and refer when appropriate

With the emergence of new technologies, treatments, and clinical trial results, controversies on how to best manage patients are becoming increasingly evident. The program focused on several of these "hot" topics in a Pro vs Con debate format followed by active panel discussions.

At the conclusion of this conference, participants were able to:

- Evaluate treatment options and better understand benefits and risks of each option.
- Incorporate into practice recent study results in the management of a variety of retinal diseases
- Assess potential future treatments and devices for managing retinal disease

Program on Suicide Prevention

A Program on Suicide Prevention" with guest speaker Dr. Suleman Merchant (Ex-Dean and HoD Radiology, LTMMC & Sion hospital, Mumbai) by Department of Psychiatry, MGM Medical College & Hospital, Navi Mumbai on 10th Sept. 2014, 1 PM – 3 PM attended by 5 participants respectively.

The session was to highlights the problem, current gap, possible solutions, mental health self-care, suicide survivor stories, latest research, where to seek help and how to help somebody who's suicidal.

Educate schools, colleges, workplaces and larger society about suicide awareness and suicide prevention, and also on how to avert a crisis by dealing with depression, anxiety, stress and other mental health issues through active self-care and psychological first-aid.

Teach individuals how to respond to somebody who's suicidal or has suicide ideation through content, training, workshops, gatekeeper program (online and offline), partnerships, and assessments (depression, stress and anxiety).

Suicide is an important issue in the Indian context. More than one lakh (one hundred thousand) lives are lost every year to suicide in our country. In the last two decades, the suicide rate has increased from 7.9 to 10.3 per 100,000. There is a wide variation in the suicide rates within the country. The southern states of Kerala, Karnataka, Andhra Pradesh and Tamil Nadu have a suicide rate of > 15 while in the Northern States of Punjab, Uttar Pradesh, Bihar and Jammu and Kashmir, the suicide rate is < 3. This variable pattern has been stable for the last twenty years. Higher literacy, a better reporting system, lower external aggression, higher socioeconomic status and higher expectations are the possible explanations for the higher suicide rates in the southern states.

"NEW AGE PSYCHIATRY"

A session was conducted on "New Age Psychiatry", Department of Psychiatry, MGM Medical College & Hospital, "8th October 2014, 9 AM to 4 PM By MGM -Medical College Navi Mumbai, attended by 3 participants.

A lot of people who have anxiety, depression, and other emotional and mental conditions either do not want to start pharmaceutical therapy because of the side effects they've heard of *or* are on pharmaceutical therapy and are tired of the side effects that they are experiencing. **More and more evidence is starting to reveal that nutrients may play a big role in alleviating mood and mental symptoms.** When someone wants to start a nutrient protocol, genetic testing needs to be completed to find out which nutrients should be used and which are not needed. Basically, testing helps curate a nutrient protocol specifically for the individual's symptoms and their test results. Testing involves finding variations in genes through salivary samples that research has shown to play a role in developing psychological symptoms.

The New Age movement is a religious or spiritual movement that developed in Western nations during the 1970s. Precise scholarly definitions of the movement differ in their emphasis, largely as a result of its highly eclectic structure. Nevertheless, the movement is characterised by a holistic view of the cosmos, a belief in an emergent Age of Aquarius – from which the movement gets its name – an emphasis on self-spirituality and the authority of the self, a focus on healing, a belief in channeling, and an adoption of a "New Age science" that makes use of elements of the new physics. The New Age movement evolved from an array of earlier religious movements and philosophies, in particular nineteenth-century groups such as the Theosophical Society. It also incorporates strands from metaphysics, perennial philosophy, self-help psychology, and various Indian teachings such as Buddhism, Hinduism and Yoga. In the 1970s, it developed a social and political component. Its central precepts have been described as "drawing on both Eastern and Western spiritual and metaphysical traditions and infusing them with influences from self-help and motivational psychology".

Workshop on Bio medical waste management & Swine flu

A session was conducted on "Bio medical waste management & Swine flu" on 13th February 2015, by MGM -Medical College, Kamothe, Navi Mumbai, attended by 5 participants.

Medical care is vital for our life and health, but the waste generated from medical activities represents a real problem of living nature and human world. Improper management of waste generated in health care facilities causes a direct health impact on the community, the health care workers and on the environment. Every day, relatively large amount of potentially infectious and hazardous waste are generated in the health care hospitals and facilities around the world. Indiscriminate disposal of BMW or hospital waste and exposure to such waste possess serious threat to environment and to human health that requires specific treatment and management prior to its final disposal. The present review article deals with the basic issues as definition, categories, problems relating to biomedical waste and procedure of handling and disposal method of Biomedical Waste Management. It also intends to create awareness amongst the personnel involved in health care unit. Biomedical waste management has recently emerged as an issue of major concern not only to hospitals, nursing home authorities but also to the environment. The bio-medical wastes generated from health care units depend upon a number of factors such as waste management methods, type of health care units, occupancy of healthcare units, specialization of healthcare units, ratio of reusable items in use, availability of infrastructure and resources etc.

Inadequate Bio-Medical waste management thus will cause environmental pollution, unpleasant smell, growth and multiplication of vectors like insects, rodents and worms and may lead to the transmission of diseases like typhoid, cholera, hepatitis and AIDS through injuries from syringes and needles contaminated with human. So this session was organized to train and educate about bio medical waste management.

The session presented detailed information on the causes of swine flu and preventive measures to be taken. It was said that this particular flu creates fright in people but with proper precaution, one can be saved from contracting the virus and at the onset timely treatment can be taken. Awareness is very important especially in villages. We should be ready for any emergency and stock all necessary medicines of swine flu. Isolated wards for swine flu patients and ensure the availability of the oximeter.

Workshop on Bio medical waste management

A session was conducted on Bio medical waste management on 23rd January 2015, 26th December 2014 and 17th October 2014 by MGM -Medical College, Kamothe, Navi Mumbai, attended by total of 11 participants.

Inadequate Bio-Medical waste management thus will cause environmental pollution, unpleasant smell, growth and multiplication of vectors like insects, rodents and worms and may lead to the transmission of diseases like typhoid, cholera, hepatitis and AIDS through injuries from syringes and needles contaminated with human. So this session was organized to train and educate about bio medical waste management.

Medical care is vital for our life and health, but the waste generated from medical activities represents a real problem of living nature and human world. Improper management of waste generated in health care facilities causes a direct health impact on the community, the health care workers and on the environment. Every day, relatively large amount of potentially infectious and hazardous waste are generated in the health care hospitals and facilities around the world. Indiscriminate disposal of BMW or hospital waste and exposure to such waste possess serious threat to environment and to human health that requires specific treatment and management prior to its final disposal. Biomedical waste management has recently emerged as an issue of major concern not only to hospitals, nursing home authorities but also to the environment. the bio-medical wastes generated from health care units depend upon a number of factors such as waste management methods, type of health care units, occupancy of healthcare units, specialization of healthcare units, ratio of reusable items in use, availability of infrastructure and resources etc.

Workshop on Hand Hygiene

A session was conducted on "Hand Hygiene" on 9th January 2015, by MGM -Medical College, Kamothe, Navi Mumbai attended by 5 participants.

The workshop sessions started with a short address on Hand Hygiene initially a presentation focusing on the importance of hands in daily routine and during clinical work was done. They also explained the ways of spread of microorganisms, including pathogens, from one person to another. It was emphasized that healthcare worker's contaminated hands can transfer various infections not only to the patients they are taking care of, but also to coworkers who are also at the risk for cross infections. These infections, also known as *Health care associated infections (HAIs)* are responsible for increasing morbidity, which leads to a chain of events like increased antibiotic use, increased antibiotic residues in environment, increased antibiotic resistance in bacteria, increased untreatable infections, increased loss of productive man-hours and in extreme cases mortality, all of which can have a negative impact on the public health and economy of a country.

Hand hygiene could be maintained either by use of *soap and water* or by using *alcohol based hand rub*, commonly known as sanitizer. The participants were trained to follow steps to maintain hand hygiene using these materials. The steps of 'How and when to wash hands with soap and water?' and 'How and when to use an alcoholic hand rub?' as recommended by world Health

Workshop on Needle Prick Injury & Hazmat Protocol

A session was conducted on "Needle Prick Injury & Hazmat Protocol" on 16th January 2015, by MGM - Medical College, Kamothe, Navi Mumbai attended by 1 participant.

Needle prick Injury : the accidental puncture of the skin by a needle during a medical intervention. Accidental exposure to blood caused by needle injuries or injuries following, cutting, biting or splashing incidents carries the risk of infection by blood-borne viruses such as the hepatitis B virus (HBV), hepatitis C virus (HCV) and human immunodeficiency virus (HIV). HBV risk= 5 – 40% HCV risk= 3 – 10% HIV risk = 0.2 – 0.5%. HBV prevalence is higher than average in intravenous drug users, homosexual men and in people from developing countries. HCV prevalence is higher in people who have had multiple blood transfusions, in dialysis patients and intravenous drug users.

Accidental contact with blood occurs especially in the following situations:

1. During re-capping
2. During surgery, especially during wound closure
3. During biopsy
4. When an uncapped needle has ended up in bed linen, surgery clothing etc
5. When taking an unsheathed used needle to the waste container
6. During the cleaning up and transporting of waste material
7. When using more complex collection & injection techniques
8. In A&E (Accident and Emergency) departments
9. In high-stress interventions (diagnostic or therapeutic endoscopy in patients with gastrointestinal bleeding)

Although this does not occur very often, there are other blood-borne microorganisms which can be transmitted via blood exposure: Other hepatitis viruses, Cytomegalovirus (CMV), Epstein-Barr virus (EBV), Parvovirus, Treponema pallidum (syphilis), Yersinia AND Plasmodium.

Accidental exposure to blood following a needle stick injury is probably one of the most common occupational health accidents in medical care.

Workshop on HAZAMAT Protocol

A session was conducted on "Hazamat Protocol" on 27th February 2015 and 10th October 2014 by MGM - Medical College, Kamothe, Navi Mumbai attended by total 10 participants.

Hazardous Materials Protocol Guidelines were discussed on -

1. Ammonia
2. Chlorine
3. Cyanide
4. Heavy Metals
5. Hydrogen Fluoride
6. Hydrogen Sulphides
7. Methyl Bromide
8. Nitrogen Oxides
9. Organophosphates
10. Crush Syndrome

A Hazard Review is used to determine the appropriate protective measures needed to be implemented before the procedure is conducted to avoid accidents and injury. It is also used to write the Safety Protocol for the procedure and should become part of the research plan. Hazard reviews are conducted to prevent accidents and injuries and avoid legal liabilities that may result when all contributing factors are not fully considered, such as:

- No documented safety procedures.
- No specific training is conducted or instructions given and documented.
- Out of date chemical inventory lists.
- Material Safety Data Sheets (MSDS) not readily available.
- Chemical storage not segregated by hazard class.
- Chemical containers not labeled.
- Improper sharps disposal.
- Blocked aisles and congested work spaces.
- Prudent Practices not followed or not enforced.
- Improper use of personal protective equipment (PPE).
- Improper use of safety equipment.
- Disabling or circumventing safety devices.

TALK ON ANTIBIOTIC POLICY

A session was conducted on "Antibiotic policy" on 26th February 2015, by MGM -Medical College, Kamothe, Navi Mumbai attended by 8 participants.

The antibiotic policy is essentially for prophylaxis, empirical and definitive therapy. The policy shall incorporate specific recommendations for the treatment of different high-risk/special groups such as immunocompromised hosts; hospital-associated infections and community-associated infections.

The hospital antibiotic policy shall be based upon: Spectrum of antibiotic activity; Pharmacokinetics/ pharmacodynamics of these medicines, Adverse effects, Potential to select resistance, Cost, Special needs of individual patient groups.

Antibiotic Policy serves as a guideline for doctors to decide which antibiotic shall be used for treating a specific infectious condition. It also states practices that must be followed while using Antibiotics on patients. The antibiotic policy must ideally be developed collaboratively.

Pharmacotherapeutic committee or the Infection control committee can take a lead role in formulation of this policy, with inputs from all clinical departments. The primary aim of the hospital antimicrobial policy is to minimize the morbidity and mortality due to antimicrobial-resistant infection; and to preserve the effectiveness of antimicrobial agents in the treatment and prevention of communicable diseases.

The policy should be based on a systematic review of scientific evidence which would minimize the risk of bias. The literature should be identified according to an explicit search strategy and defined inclusion criteria assessed against consistent methodological standards. In addition, the search terms and period of search should be mentioned.

When robust evidence is not available a hybrid of a varying degree of evidence and expert opinion may contribute to develop antibiotic policy. However, this recommendation should be done with grading according to the strength of evidence supporting them. The grading should be validated based on study design and quality and of the consistency and clinical relevance.

Workshop on documentation, Healthcare association infection, Bio medical waste management, Hand hygiene, needle stick injury protocol

A session was conducted on "Documentation, Healthcare association infection, Bio medical waste management, Hand hygiene, needle stick injury protocol" on 27th March 2015, by MGM -Medical College, Kamothe, Navi Mumbai attended by 3 participants.

Regardless of sector, size, structure, or maturity, regulated organizations must establish an appropriate quality management system (QMS) to be successful. The most important aspect of any QMS is the way in which it is documented to manifest the system hierarchy.

Healthcare interpreters have long been considered language workers. While it is true that their expertise lies in communication, healthcare interpreters must also be considered part of the healthcare workforce; and as healthcare workers, interpreters must be familiar with the specialized knowledge to be safe members of the healthcare team.

Objectives of the workshop was:

- Become a fully competent and safe member of the health care team.
- Know how to:
 - o Avoid bringing germs to patients in health care setting
 - o Avoid bringing germs from health setting into your family and community
 - o Avoid being a vector between patients
 - o Avoid getting sick yourself
 - o Practice hand hygiene effectively and use PPE (Personal Protective Equipment)
 - o Avoid getting hurt, abused, irradiated, depressed

Sections of the workshop:

- Infection control concepts, measures, and expectations of all health team members
- Safety risks and responsibilities as a worker in the health care industry

INDUCTION PROGRAM

An Induction program was conducted on 26th November 2014, by MGM -Medical College, Kamothe, Navi Mumbai attended by 4 participants.

An induction programme is an important process for bringing staff into an organisation. It provides an introduction to the working environment and the set-up of the employee within the organisation. The process will cover the employer and employee rights and the terms and conditions of employment.

As a priority the induction programme must cover any legal and compliance requirements for working at the company and pay attention to the health and safety of the new employee.

This session covered -

- **Meaning of Induction Programme**
- **Induction of Employees**
- **Steps Involved in Induction Programme-** General orientation by the staff -the personnel department, Specific orientation by the immediate boss, e.g., the manager or supervisor, Follow-up orientation (within one week up to six months) by the personnel manager or immediate boss to ensure post-employment satisfaction — through talk, guidance and counseling.
- **Benefits of an Induction Programme**
- **Typical Induction Programme**

INDUCTION PROGRAMME ON INFECTION CONTROL

A session was conducted on "Infection Control" on 19th November 2014, by MGM -Medical College, Kamothe, Navi Mumbai attended by 9 participants.

This was an introduction session to the basics of infection prevention and control. This was conducted to discuss the following: ☐ what is an infection ☐ how microorganisms are transmitted ☐ strategies we use in our everyday practice to reduce the risk of infection transmission to ourselves, patients/residents and visitors, and ☐ your health and safety.

The Preventing infection in Care Induction programme was a short introduction to the 10 Standard Infection and Control Precautions (SICPs)

1. Hand Hygiene 2. Personal Protective Equipment (PPE) 3. Respiratory Hygiene and Cough Hygiene 4. Safe Management of Blood and Body Fluid Spillages. 5. Occupational Safety 6. Safe Management of the Care 7. Safe Management of Care 8. Patient Placement/Assessment for Infection Risk Reflect 9. Safe Management of Linen Record 10. Safe Management of Waste (incl sharps)

Workshop on Infection Control & NABH

A session was conducted on "Infection Control & NABH" on 12th November 2014 by MGM -Medical College, Kamothe, Navi Mumbai attended by total 6 participants.

Amongst various preparation that is required for preparing a hospital for accreditation, training of staff is perhaps the most important for implementation. Staff needs to be trained on various policies and procedures documented by the hospital to address NABH standards. Some of the topics require only an orientation while for some a detailed training may be required along with practical demonstration or drills. Here is a list of various training topics that are relevant for accreditation. The following topics were covered-

- Training topics related to Access, Assessment and Continuity of Care
- Training topics related to Care of Patient
- Training topics related to Management of Medication
- Training topics related to Patients' Rights and Education
- Training topics related to Hospital Infection Control
- Training topics related to Continual Quality Improvement
- Training topics related to Responsibilities of Management
- Training topics related to Facility Management and Safety
- Training topics related to Human Resources Management
- Training topics related to Information Management System

Workshop on Hydrant system training - Security staff

A session was conducted on "Hydrant system training - Security staff" on 11.04.15 by MGM -Medical College, Kamothe, Navi Mumbai attended by total 4 participants.

In a building, a *fire hydrant system* is a *safety measure* or *emergency equipment* required in some buildings that comprises a series of components that when assembled together provide a source of water to assist fire authorities in a fire. A *fire hydrant system* is a water supply with sufficient pressure and flow delivered through pipes throughout a building to strategically located network of valves for fire-fighting purposes.

In some circumstances, water from a reticulated fire hydrant system can also be shared with other safety measures such as automatic fire sprinkler systems or fire hose reels.

Fire hydrant systems comprise the following primary components- Pipework & Valves

- Fire Brigade Booster
- Pumpset
- Hydrant, Hydrant Valve or Landing Valve & Coupling
- Layflat Fire Hose
- Block Plan
- Water Supply & Storage

Report on Research Methodology And Scientific Writing

Date 08.11.2014

**Venue: Class room, Second floor
MGM Medical College building,
Navi Mumbai**

A lecture focusing on **Research Methodology And Scientific Writing**, for our PhD students was given by Dr. Raman Yadav, Technical Director, OMICS Lab, MGMSBS on 08.11.2014

With his vast experience in Industry like Reliance and with many patents to his credit, he spoke on writing research proposals, obtaining funds for research, selecting research designs, searching the literature and review, collection of data and analysis, preparation of thesis, writing research papers for journals, citation and listing of references, preparation of visual materials, oral and poster presentation in conferences, and ethical issues in research.

He shared some tips to improve the writing skills for research students.

- The steps to be followed by a research students starting from Outline of Research Work to the submission
- The thesis comprises of many chapters. Each chapter is further divided into sections and specific units thereof. The subheadings are dealt systematically.
- Cross references and a comprehensive list of sources for further reading have been provided for each chapter.

Report on Lecture on Biostatistics

Date: 19.09.2014

**Venue: Class room , second floor
MGM Medical college Building**

A lecture focusing on Research Methodology , for our PhD students was given by Dr. D.S.Joshi on 19th September 2014

Dr. Joshi having 40+ years of experience in BARC and other international institutes, explained basic concepts of Biostatistics and how it helps in designing the protocol for research which can effectively be used for a research project and IPR techniques.

He had given an overview of basic biostatistics procedures that are helpful in understanding medical research findings. He enlightened us that there are several books on this topic now and several articles are written on this subject in various reputed journals on individual topics of interest or as a series of chapter articles. This may also be useful for medical UG/PG students viva and biomedical junior faculty in understanding advancement of knowledge in their area of specialization.
