Subject: EOE- Professional Education Initiative

Dear Sir,

We thank you for your time and the discussions we had and would be pleased to organize an EOE program comprising of a Suture Practicum, SOTM AWC & Basic Lap training which is a professional education initiative for the surgeons/residents of the department for your esteemed institute on 7-8 May 2016 at your hospital premises. Request you to kindly approve participants to undergo the said programme.

Suture Practicum, SOTM AWC & Basic Lap training will help the surgeons/residents to understand the current concepts in Advanced Wound closure & Basic Laparoscopic techniques and to understand the usage, application and preparation of different types of suture material and Lap instruments for enhanced surgical outcomes in patients. The Sponsorship proceeds shall be used by the Sponsor exclusively for expenses directly related to the Program. Sponsorship for this meeting will cover food & beverages, AV costs, expenses incurred to bring the faculty (Travel, stay & Honorarium) & stationary for the participants/program.

Sponsorship is not conditional upon any obligation to use, recommend, promote or purchase products of Johnson & Johnson Medical Johnson & Johnson Medical India (or any of its affiliates) and is not intended to influence you to do so.

Middle India, Johnson & Johnson Medical will not be responsible for any injury, death or property damage or other loss, claim or injury of participants may suffer resulting from an unforeseen event during this activity.

If the participants currently are or within six months will attain a position to influence purchasing decisions by a government entity or a health-care-related institution owned or substantially controlled by a government or public body, they will notify the purchase decision-maker of this congress attendance sponsorship.

Should you need any further clarifications on the same, please feel free to contact our representative Mr. Vinayak Pardikar on 9860221022

We are confident that the programmes would be of great benefit to the participants and we look forward to your support.

We request you to provide details of the participants attending the program.

Assuring you of our best services at all times.

With best regards,

Pratap Maurya

Zonal Manager, Middle India

Johnson & Johnson Medical India

**WORKSHOP REPORT**

Name of the workshop: - Pyrexia of unknown origin

MGM Medical College Navi Mumbai

Dates: - 18-12-2015

Venue : 2nd Floor Seminar Room of MGM Hospital, Kamothe, Navi Mumbai,

MGM Medical College Navi Mumbai organized a workshop on Pyrexia of unknown origin (PUO), which is a syndrome that has long tested the skills of physicians to achieve a diagnosis in affected patients. By definition, patients included in this syndrome will be more difficult to diagnose as they have already resisted classification during baseline investigations. Furthermore, investigation of PUO requires knowledge of many diseases across a range of clinical specialties, as well as knowledge of less commonly used investigative tools. As both society and medicine continue to change, the aetiology and epidemiology of the diseases that cause PUO also change.

The session was for physicians to approach PUO in a logical manner, and for the causes and approach to PUO to be continuously reviewed. This program was intended to provide with a basic knowledge about PUO, prevalence and causes of PUO, diagnostic approach and clinical perspective, evaluation of PUO, role of lab investigation.

### WORKSHOP REPORT

Breakthroughs and Challenges in the Diagnosis and Management of Tuberculosis

MGM Medical College Navi Mumbai

Dates: -18<sup>th</sup>-19<sup>th</sup> March 2016

The workshop commenced on 18<sup>th</sup> March, 2016 at 10:00 AM in the morning and attended by 75 teaching and non-teaching staff. It was about holistic approach on tackling the disease, known to be extremely prevalent in the subcontinent. WHO's theme for World TB day observed on 24<sup>th</sup> March 2016 is 'Unite to End TB' was clearly brought out in the various presentations of the session.

The session started with discussions on existing strategies in the country and the associated statistics in different states. Subsequently, it mainly focussed on the statistics in the state of Maharashtra, number of new cases, number of old cases, number of drug resistant cases and number of non-compliant cases. Subsequent morning started with the discussions about the subsidies in the drug rates and introduction of new drugs in the market.

Challenges in the form of increasing number of MDR TB cases and an upwards going chart on the number of non-compliant cases in the state of Maharashtra was elaborated extensively. The solutions were put forth and an interactive session on how to tackle the disease in the next decade was very lively and informative.

### WORKSHOP REPORT

Name of the workshop: - RPR Test

MGM Medical College Navi Mumbai

Dates: -

21-06-2016

The MGM Medical College Navi Mumbai organized a workshop on RPR Test. A rapid plasma regain (RPR) test is a blood test used to screen you for syphilis. It works by detecting the nonspecific antibodies that your body produces while fighting the infection.

Syphilis is a sexually transmitted infection (STI) caused by the spirochete bacterium *Treponema pallidum*. It can be fatal if left untreated. Combined with specific antibody testing, the RPR test allows your doctor to confirm the diagnosis of active infection and start your treatment. This reduces the chances of complications and the spread of the disease by an infected but unaware person.

This program was intended to provide with a basic understanding of RPR test like when it is recommended, how is blood for the RPR test obtained, risks of the RPR test & follow-up after the RPR test.

### WORKSHOP REPORT

Name of the workshop: - Ventilatory management of ARDS patients

MGM Medical College Navi Mumbai

Dates: - 15-09- 2015

The MGM Medical College Navi Mumbai organized a workshop on Ventilatory management of ARDS patients. Ventilatory management of critically ill patients, including those with ARDS, has changed dramatically over the past three decades. The paradigm of ventilation in critically ill patients has shifted from one that targeted physiological, and at times even supra physiological goals to one that merely accepts the patho physiology, at least to a certain level, and aims to prevent further harm.

This program was intended to provide with a basic understanding of management of ARDS patients with both mechanical ventilation (low tidal volume ventilation, open lung ventilation, high peep requirement, inverse ratio ventilation, unconventional approach-APRV, HFV) and general measures (prone positioning, nitric oxide, NMBA, fluid management, ECMO) and also the precautions and risks associated with it.

### WORKSHOP REPORT

Name of the workshop: - Anaesthesia machine

MGM Medical College Navi Mumbai

Dates: -

10-03-2016

The MGM Medical College Navi Mumbai organized a workshop on Anaesthesia machine. The most important piece of equipment that the anaesthesiologist uses is the anaesthesia machine. Safe use of anaesthesia machine depends upon an interaction between the basic design of the machine with its safety features and the knowledge and skills of the anaesthesiologist.

The basic function of an anaesthesia machine is to prepare a gas mixture of precisely known, but variable composition. The gas mixture can then be delivered to a breathing system. Anaesthesia machine itself has evolved from a simple pneumatic device to a complex array of mechanical, electrical and computer – controlled components. Much of the driving force for these changes have been to improve patient safety and user convenience. Though many modifications have been brought out still the basic design has not much changed. Hence, knowledge of the basic design of the anaesthesia machine is a must for all the practicing anaesthesiologists to understand the modern anaesthesia workstation.

This workshop program was intended to provide with a basic understanding of anaesthesia machine, types of anaesthesia machines, its components, pressure system, working of anaesthesia machine, precautions and risks associated with it & also the safety measures while handling the anaesthesia machine.

### WORKSHOP REPORT

Name of the workshop: - Basic knowledge & fire extinguisher workshop  
MGM Medical College Navi Mumbai

Dates: - 06-01-2016

The MGM Medical College Navi Mumbai organized a workshop on Basic knowledge o& fire extinguisher workshop. Having fire extinguishers in a building will not improve its fire safety unless occupants are sufficiently trained to use them. Therefore, it is imperative that employees undergo appropriate fire extinguisher workshop specifically designed for the building they are in.

It was an effective workshop program to cover more than the mere basics of how to operate a fire extinguisher. It should empower trainees to feel more confident in identifying sources of fire within the building as well as help them to decide how to deal with fire situations.

This workshop program was intended to provide with a basic knowledge of understanding key fire risks, classes of fire and corresponding fire extinguishers, how to locate fire extinguishers, how to operate a fire extinguisher, assessing a fire situation and how to reduce the risks

### WORKSHOP REPORT

Name of the workshop: - Cultivation of viruses

MGM Medical College Navi Mumbai

Dates: -

24-07-2015

The MGM Medical College Navi Mumbai organized a workshop on Viruses can be cultivated within suitable hosts, such as a living cell. To study bacteriophages, for example, bacteria are grown in a suitable growth medium; then bacteriophages are added. The bacteriophages multiply within the bacteria and increase their numbers substantially.

This workshop program was intended to provide with a basic knowledge of understanding the viruses, purpose of virus cultivation, identification, how viruses grow in culture, virus cultivation systems, culture conditions and what type of media is used.

The workshop was attended by Teaching and non teaching staff of MGM Medical college, Navi Mumbai.

### WORKSHOP REPORT

Name of the workshop: - Medical ethics

MGM Medical College Navi Mumbai

Dates: - 29-07-2015

The MGM Medical College Navi Mumbai organized a workshop on Medical Ethics. Healthcare professionals are required to make difficult decisions every day as part of their jobs. For each situation that arises, they must strike a balance between:

- Providing effective care;
- Doing what is best for a particular patient and for society in general; and
- Allowing a patient to have a voice in treatment options.

To help guide them when making difficult decisions, healthcare professionals rely on a set of principles known as medical ethics. Medical ethics provides information about the standards of acceptable behaviour that serves as the foundation for medical care.

This workshop program was intended to provide key values for deciding ethical issues. Many professional ethicists recommend using four basic values, or principles, to decide ethical issues:

- Autonomy: Patients basically have the right to determine their own healthcare.
- Justice: Distributing the benefits and burdens of care across society.
- Beneficence: Doing good for the patient.
- No malfeasance: Making sure you are not harming the patient.

Indeed the workshop was attended by Teaching and non teaching staff of all colleges of MGM Institute of Health Sciences.

### WORKSHOP REPORT

Name of the workshop: - Mycotoxin

MGM Medical College Navi Mumbai

Dates: -

22-01-2016

The MGM Medical College Navi Mumbai organized a workshop on Mycotoxins. Mycotoxins are toxic compounds that are naturally produced by certain types of moulds (fungi). Moulds that can produce mycotoxins grow on numerous foodstuffs such as cereals, dried fruits, nuts and spices. Mould growth can occur either before harvest or after harvest, during storage, on/in the food itself often under warm, damp and humid conditions. Most mycotoxins are chemically stable and survive food processing.

Several hundred different mycotoxins have been identified, but the most commonly observed mycotoxins that present a concern to human health and livestock include aflatoxins, ochratoxin A, patulin, fumonisins, zearalenone and nivalenol/deoxynivalenol. Mycotoxins appear in the food chain as a result of mould infection of crops both before and after harvest. Exposure to mycotoxins can happen either directly by eating infected food or indirectly from animals that are fed contaminated feed, in particular from milk.

This workshop program was intended to provide the knowledge about mycotoxins, types of mycotoxins, pathogenesis, effect of mycotoxins on humans and animals, methods of detection of mycotoxins in food and feed and the diseases caused by mycotoxins.

### WORKSHOP REPORT

Name of the workshop: - Brainstorming session on diagnosis of Tuberculosis

MGM Medical College Navi Mumbai

Dates: -

19 – 20 March 2016

The MGM Medical College Navi Mumbai organized a workshop on Tuberculosis, which is one of the most damaging infectious diseases in human history and yet one of the most widely misunderstood. Tuberculosis is a curable disease that, in its most common form, attacks the lungs but can affect almost any part of the body. This most common form is called active pulmonary TB disease, meaning "of the lungs."

Tuberculosis is the single greatest curable infectious killer in today's world. TB is a global problem - one that requires global solutions. Although the incidence of disease is concentrated in the developing world, there is evidence to suggest a new resurgence in industrialized countries. This program was intended to provide with a basic understanding of tuberculosis transmission, diagnosis, prevention, and treatment. In doing so, it aims to empower challenge entrenched stigma associated with TB and to become active participants in the fight against the disease.

This program was designed to provide essential information that will allow us to prevent and manage tuberculosis and to support others. The program was attended by teaching and non teaching staff of MGMIHS.

### WORKSHOP REPORT

Name of the workshop:- Quality Management system by Biochemistry Department.

MGM Medical College Navi Mumbai

Dates:- 10-01-2016 to 14-01-2016

The MGM Medical College Navi Mumbai organized a workshop on quality management system (QMS). It is important to plans, controls, and improves the elements that impact on the achievement of the desired results by the laboratory and on the satisfaction of the users. There are different standards that establish requirements for the implementation of a quality management system for laboratories, and a cross comparison between them is shown.

Additionally, external quality assurance or assessment (EQA) programs offer multiple benefits to laboratories: method validation, comparing of results with other laboratories, testing problem identification, accreditation requirement compliance, and credibility. In order to control the quality of the procedures, these programs are a tool to keep the laboratory procedures and every variable involved in (staff, equipment, and method) well controlled.

The workshop program was designed to provide the essential information regarding accuracy, precision, internal quality control (IQC), external quality assessment (EQC), proficiency surveillance, standardization, errors in quantitative system and so on.

### **WORKSHOP REPORT**

Name of the workshop:-Celebration of World TB Day by Respiratory Medicine Department.

MGM Medical College Navi Mumbai

Dates:-30-03-2016

Each year, we commemorate World Tuberculosis (TB) Day on March 24 to raise public awareness about the devastating health, social and economic consequences of TB, and to step up efforts to end the global TB epidemic. The date marks the day in 1882 when Dr Robert Koch announced that he had discovered the bacterium that causes TB, which opened the way towards diagnosing and curing this disease.

TB remains the world's deadliest infectious killer. Each day, nearly 4500 people lose their lives to TB and close to 30,000 people fall ill with this preventable and curable disease. Global efforts to combat TB have saved an estimated 54 million lives since the year 2000 and reduced the TB mortality rate by 42%. To accelerate the TB response in countries to reach targets – Heads of State came together and made strong commitments to end TB at the first-ever UN High Level Meeting in September 2018.

The theme of World TB Day 2019 - 'It's time' – puts the accent on the urgency to act on the commitments made by global leaders to:

- scale up access to prevention and treatment;
- build accountability;
- ensure sufficient and sustainable financing including for research;
- promote an end to stigma and discrimination, and
- promote an equitable, rights-based and people-centered TB response.

The main motive of this workshop activity was to raise public awareness of the health, social and economic consequences of tuberculosis (TB).

### WORKSHOP REPORT

Small Nano material for affordable diagnosis by Dr. D. RaviShankaran

MGM Medical College Navi Mumbai

Dates:- 2016

Applications of nanomaterials in health care diagnostics have gained immense interest in recent years owing to their superior properties compared to traditional materials. Many different areas of applications have been identified spanning from monitoring a disease or treatment to identification of tissue types in the case of transplant need. Nanomaterials extensively explored for health care diagnostics are predominantly either purely organic or inorganic materials, or combination of both, i.e., hybrid nanomaterials. Organic nanomaterials including carbon nanotubes, nanocrystals, liposomes, dendrimers, micelles, hyper-branched organic polymers, molecularly imprinted nanostructures and polymeric hydrogel nanoparticles have been broadly utilized as imaging and therapeutic agents. Inorganic nanomaterials, such as quantum dots, superparamagnetic iron oxide nanoparticles, metallic nanoparticles, and metal oxides, have also attracted great attention for health care diagnostics, particularly in biosensing and biosensor construction. These materials have critical applications for various molecular imaging techniques including magnetic resonance imaging, positron emission tomography, computed tomography, single-photon emission tomography, optical imaging, and ultrasound imaging techniques.

The main motive of this workshop activity was to focus on the use of organic/inorganic or hybrid nanomaterials for health care diagnostics applications.

### WORKSHOP REPORT

Sensitization workshop on ICD-10 and ICF, Central Bureau of Health Intelligence.

MGM Medical College Navi Mumbai

Dates:-2016

A workshop was conducted by Central Bureau of Health Intelligence (CBHI) at MGM Medical College to promote the use of ICF in Tertiary Care Hospital & Medical College (both Govt. & Private Hospital).

ICF belongs to the "family" of international classifications developed by the World Health Organization (WHO) for application to various aspects of health. The WHO family of international classifications provides a framework to code a wide range of information about health (e.g. diagnosis, functioning and disability, reasons for contact with health services) and uses a standardized common language permitting communication about health and health care across the world in various disciplines and sciences. Functioning and disability associated with health conditions are classified in ICF.

ICD-10 provides a "diagnosis" of diseases, disorders or other health conditions, and this information is enriched by the additional information given by ICF on functioning together, information on diagnosis plus functioning provides a broader and more meaningful picture of the health of people or population, which can then be used for decision-making purposes.

There is a widely held misunderstanding that ICF is only about people with disabilities; in fact, it is about all people. The health and health-related states associated with all health conditions can be described using ICF. In other words, ICF has universal application.

ICF provides a description of situations with regard to human functioning and its restrictions and serves as a framework to organize this information. It structures the information in a meaningful, interrelated and easily accessible way.

The main motive of this workshop activity was to focus on the use of common language for describing health and health-related states in order to improve communication between

### **WORKSHOP REPORT**

Name of the workshop:-CME Dementia. An overview

MGM Medical College Navi Mumbai

Dates:-19-02-2016

This workshop was for primary care providers, neurologists, geriatricians, psychiatrists, internal medicine providers, physician assistants, nurse practitioners, psychologists, social workers, physical therapists and other health care professionals who treat patients with dementia.

This workshop will alert regional health care providers and social workers to the challenges faced by the elderly in our communities, particularly when they are afflicted by dementia. Evidence indicates that certain lifestyle factors experienced by the elderly, like depression, isolation and sedentariness can actually exacerbate dementia. Over the past 20 years, scientists have investigated proactive strategies as potential protective influences against cognitive decline and dementia. Social engagement, physical activity, cognitive workshop, and dietary modification are among the potentially beneficial approaches to mitigate cognitive decline. A delay in onset of dementia by just a few years has the potential to dramatically reduce its prevalence.

The workshop program was designed to provide the essential information so that the participants will be able to, recognize symptoms of isolation, neglect, depression and abuse among the elderly, identify proactive opportunities for brain health, apply best practices in diagnosing and/or treating persons with dementia, implement methods to preempt dementia complications.

### WORKSHOP REPORT

Name of the workshop:-CME- An approach to clinical practices in Transfusion medicine and Haematology.

MGM Medical College Navi Mumbai

Dates:-18-02-2016

Blood transfusions are an important part of the treatment of many malignant and nonmalignant hematologic disorders. Children with thalassemia, adults with myelodysplastic syndromes, and patients with autoimmune hemolytic anemias, leukemia, or aplastic anemias depend on blood transfusions. Modern treatment procedures like high-dose therapy and stem cell transplantation make an intensive support with blood products necessary.

The workshop program was designed to provide the essential information related to serologic basis of blood transfusion, the blood products available, common and rare side effects of blood transfusions, and other considerations

### **EMBALMING**

*A session was conducted on "Embalming" on 12.08.15 by MGM -Medical College kamothe Navi Mumbai, Embalming is the art and science of preserving human or animal remains by treating them (in its modern form with chemicals) to forestall decomposition.*

The intention is usually to make the deceased suitable for public or private viewing as part of the funeral ceremony, or keep them preserved for medical purposes in an anatomical laboratory. The three goals of embalming are sanitization, presentation, and preservation, with restoration being an important additional factor in some instances.

Performed successfully, embalming can help preserve the body for duration of many years. Embalming has a very long and cross-cultural history, with many cultures giving the embalming processes a greater religious meaning the session was attended by 2 participants

### MUSEUM SPECIMEN MOUNTING

*A session was conducted on "Museum Specimen mounting" 13.09.15. by MGM -Medical College kamothe Navi Mumbai, Maharashtra attended by 2 participants. The session was on detail study of Making of a good museum specimen it involves meticulous planning at the time of biopsy, grossing and careful handling thereafter. Oral lesions vary widely in their gross presentations, color, texture, pattern of growth and are relatively smaller and more fragile. Crafting a museum specimen requires a more skilled workmanship and flexible material to work with. We describe here the institutional experience of the use of translucent materials readily available in any histo-pathological laboratory combined with routine stationery in displaying a specimen to its optimal elegance.*

Museum specimens are generally mounted in glass jars or Perspex boxes using center plates or glass rods to which the specimen is fixed or sutured. Use of Perspex sheets as a center plate requires the use of power tools (saw, drills, vice etc.), which in turn require time and skill to produce good results. A more feasible alternative would be polyethylene terephthalate (PET, PETE or polyester) that is commonly used for carbonated beverage and water bottles. PET provides sufficient alcohol and essential oil barrier properties, generally good chemical resistance (although acetones and ketones will attack PET) and a high degree of impact resistance and tensile strength. These bottles are translucent, thin and inert, and can easily be cut with scissors or a blade in order to adapt properly to the size of the jar. PET sheets can be easily cut, sutured to the specimens (multiple if needed) and does not visually hinder the display. For a smaller jar, a hinge-like preparation of these plastic bottles gives a stable support to the specimen. The PET sheets may be covered by a black polythene sheet to enhance the contrast of the specimen being displayed. The PET sheets used in our department for mounting specimens have not lost integrity, color or contour over a period of 12 months. For highlighting different components of a specimen, colored gem clips, thermocol balls, beads and pins were used

### WIDAL TEST

A session was conducted on "Widal Test" on 16.9.15. by MGM -Medical College kamothe Navi Mumbai, attended by 1 participant.

The session detailed the important questions like- Why Would You Use the Widal test? When to Go For the Widal test? How To Prepare For The Widal Test? How are Two Kind of Widal Tests Performed [Procedure]? The Qualitative Slide Test? The Quantitative Slide Test? The Quantitative Tube Test? How to Read Widal test Report [Interpretation]?

The Widal test is an agglutination test that helps to detect the presence of serum agglutinins in the patient's serum that has fever and typhoid. This test has been developed by **Georges Ferdinand Widal in 1896** and thus the name. The serum of the patient is tested for O and H antibodies against various antigen suspensions. The Widal test is a straightforward and inexpensive test that takes just a few minutes, and it helps to *detect the presence of salmonella antibodies in a patient's serum.*

### ANAEROBIC CULTURE METHODS

A session was conducted on "Anaerobic Culture methods" detailing about Anaerobic Culture Media, Specimen Collection and Methods of Anaerobic Culture on 20.09.15 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participant.

Anaerobic cultures are carried out in an environment that is free of oxygen, followed by incubation at 95°F (35°C) for at least 48 hours before the plates are examine. The cultures methods of anaerobic bacteria covered out were as follows:

1. McIntosh-Fildes anaerobic jar
2. Anaerobic glove box
3. Anoxomat

### Anaerobic Culture Methods

#### • Anaerobic jar

anaerobic jar is an instrument used in the production of an anaerobic environment. This method of anaerobiosis is as others is used to culture bacteria which die or fail to grow in presence of oxygen

Sodium bicarbonate and sodium borohydride are mixed with a small amount of water to produce  $\text{CO}_2$  and  $\text{H}_2$ . A palladium catalyst in the jar combines with the  $\text{O}_2$  in the jar and the  $\text{H}_2$  to remove  $\text{O}_2$ .

### MAC CONKEY AND MH AGAR

A session was conducted on "Mac Conkey and MH agar" on 6.10.15. by MGM -Medical College kamothe Navi Mumbai, attended by 1 participants.

MacConkey agar is **an indicator**, a selective and differential culture medium for bacteria designed to selectively isolate Gram-negative and enteric (normally found in the intestinal tract) bacilli and differentiate them based on lactose fermentation.

The session covered- MacConkey Agar- Composition, Principle, Uses, Preparation and Colony Morphology

### **LAB FUMIGATION**

*A session was conducted on "Lab Fumigation" on 18.10.15 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participant. The session covered- Process and Safety*

#### **Process**

Fumigation usually involves the following phases: First the area to be fumigated is usually covered to create a sealed environment; next the fumigant is released into the space to be fumigated; then, the space is held for a set period while the fumigant gas percolates through the space and acts on and kills any infestation in the product, next the space is ventilated so that the poisonous gases are allowed to escape from the space, and render it safe for humans to enter.

#### **Safety**

Fumigation is a hazardous operation. Generally it is a legal requirement that the operator, carrying out the fumigation operation, holds official certification to perform the fumigation as the chemicals used are toxic to most forms of life, including humans. Post operation ventilation of the area is a critical safety aspect of fumigation. It is important to distinguish between the pack or source of the fumigant gas and the environment which has been fumigated. While the fumigant pack may be safe and spent, the space will still hold the fumigant gas until it has been ventilated.

### **MAINTAINENCE OF STOCK CULTURE**

*A session was conducted on "Maintainence of stock culture " on 27.10.15 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participants.*

All practicing microbiologists have felt the need to preserve the viability of microorganisms with which they work. In addition, all the cultural characteristics of a culture, as they were at the time of preservation, must be conserved. The nature of work being done will determine whether the preservation requirement is only very short-term or for an unlimited time period. Long-term preservation of a culture is required if a culture is to be deposited in one of the service culture collections with a view to preserving something of scientific value "for perpetuity". Many methods of preservation for microorganisms have been developed.

There are 4 basic aims discussed in session of maintaining and preserving the microorganisms were: -

[I] To keep culture alive

[ ii]. Uncontaminated and

[iii] As healthy as possible, both physically and physiologically, preserving their original properties until they are deposited in any major collections.

[iv]To have adequate stocks and appropriate systems for replenishing stocks when necessary.

### **EQAS**

*A session was conducted on 'EQAS' [External Quality Assurance Service] on 18.03.16. By MGM -Medical College kamothe Navi Mumbai, attended by 1 participant.*

External Quality Assurance (EQA) is a system of independent monitoring of the development and delivery of end-point assessment (EPA) of apprenticeships. It is important to ensure that EPA is rigorous and fair regardless of which organisation is delivering the EPA. EQA is a key aspect of the reformed apprenticeship system, ensuring that EPA is being delivered effectively and consistently by different end-point assessment organizations (EPAOs), and that EPA plans are fit for purpose.

*In this session following topics were covered*

1. What is external quality assurance?
2. What does external quality assurance involve?
3. Who can undertake external quality assurance?
4. ANNEX 1. Questions for prospective external quality assurance organizations to answer

### RPR TEST

A session was conducted on "RPR test" on 19.03.16 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participants.

A rapid plasma reagin (RPR) test is a blood test used to screen you for syphilis. It works by detecting the nonspecific antibodies that your body produces while fighting the infection. Syphilis is a sexually transmitted infection (STI) caused by the spirochete bacterium *Treponema pallidum*. It can be fatal if left untreated. Combined with specific antibody testing, the RPR test allows your doctor to confirm the diagnosis of active infection and start your treatment. This reduces the chances of complications and the spread of the disease by an infected but unaware person.

*In this session following topics were covered*

1. What is a rapid plasma reagin (RPR) test?
2. When is an RPR test recommended?
3. How is blood for the RPR test obtained?
4. Risks of the RPR test
5. Understanding your result
6. Follow-up after the RPR test

### **CONCENTRATION OF STOOL**

*A session was conducted on "Concentration of stool" on 02.03.16 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participant.*

The clinical significant of stool concentration techniques were discussed-

- Diagnosis of digestive system infection disease; bacterial, parasites, virus and fungi.
- Diagnosis of pancreas disorders (inflammation) which associated with malabsorption of nutrients
- Primary screening test for some types of digestive system malignancy such as; colon cancer
- Primary screening test for peptic ulcer disease and some types of anaemia.

Diagnosis of intestinal parasite is confirmed by the recovery of protozoan, trophozoite and cyst, helminthes eggs and larvae in the chemical parasitology laboratory. Microscopic examination of faeces is essential for the recognition and identification of the intestinal parasites. Due to the low density of the parasites in the faeces, direct microscopy is used for the observation of motile protozoan trophozoite and examination of cellular exudates (discharge) is not recommended solely for the routine examination of suspected parasite infections. It is essential to increase the probability of finding parasite in faecal samples to allow for an accurate diagnosis. Therefore a concentration method is employed.

### TSI and Urease test

A session was conducted on "TSI and Urease test" on 15.01.16 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participants.

The Triple Sugar Iron (TSI) test is a microbiological test named for its ability to test a microorganism's ability to ferment sugars and to produce hydrogen sulfide. An agar slant of a special medium with multiple sugars constituting a pH-sensitive dye (phenol red), 1% lactose, 1% sucrose, 0.1% glucose, as well as sodium thiosulfate and ferrous sulfate or ferrous ammonium sulfate is used for carrying out the test. All of these ingredients when mixed together and allowed solidification at an angle result in a agar test tube at a slanted angle. The slanted shape of this medium provides an array of surfaces that are either exposed to oxygen-containing air in varying degrees (an aerobic environment) or not exposed to air (an anaerobic environment) under which fermentation patterns of organisms are determined. Urea Agar was developed by Christensen in 1946 for the differentiation of enteric bacilli. The urease test is used to determine the ability of an organism to split urea, through the production of the enzyme urease. In this session following topics were covered

1. Composition of Triple Sugar Iron Agar (TSI)
2. Why Sucrose is added in TSI?
3. Preparation of TSI agar medium
4. Procedure for Triple Sugar Iron Agar (TSI) Test
5. Interpretation of Triple Sugar Iron Agar Test
6. Some example of Triple Sugar Iron (TSI) Agar Reactions:
7. Principle of Urease Test
8. Rapid Urease Test (RUT)
9. Urea Breath Test
10. Uses of Urease Test
11. Media used in Urease Test- Composition Preparation
12. Procedure of Urease Test
13. Result Interpretation of Urease Test
14. Quality Control of Urease Test
15. Limitations of Urease Test

### Sterilization control for autoclave

A session was conducted on "Sterilization control for autoclave" on 10.03.16 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participants.

Three phase sequential integrator for the **control** of steam **sterilization** both in high vacuum or gravity air removal **autoclaves**. Suitable for steam **sterilization** cycles at 121°C and 134°C. PERFORMER indicator is completely laminated to prevent ink from migrating to the product and to preserve test result Biological Indicators contain viable microorganisms providing a defined resistance to a specific sterilization process. This type of indicator provides information on whether necessary conditions were met to kill a specified number of microorganisms for a given sterilization process. Most of the biological indicators contain endospores, or bacterial spores which are considered some of the most challenging to kill.

### SOP WRITING

A session was conducted on "SOP writing" on 16.01.16 by MGM -Medical College kamothe Navi Mumbai, attended by 1 participant.

A Standard Operating Procedure (SOP) is, the documentation of the process. It helps establish things like what are the different steps, what's the scope, who's in charge, etc. SOPs are helpful for 2 things...

- **On boarding Employees** – It's hard to remember the exact step-by-step of every process. Documentation makes it easy for your employee to get up to speed on how to execute processes
- **Enforcing Best Practices** – There's always an instance of a process that is more efficient than the others. You can establish this process as the "best practice" with a standard operating procedure, making sure that all of your employees follow the best variation of the process.

The SOP would include...

- **Title Page** – This can include the name of the process, the name of the department that the SOP applies to, etc.
- **Table of Contents** – If the document is too long, you can always make a table of contents to make it easier to navigate.
- **The Procedure(s)**
  - **Scope** – Some processes can span different departments, teams, etc. To make sure you don't make the SOP document overcomplicated, specify the scope of the procedure you're documenting.
  - **Terminology** – Define any complicated term. Think, abbreviations, acronyms, etc.
  - **The Procedure** – Process documentation, map, etc.
  - **Supplementary Information** – This can be just about anything, depending on the process. For example, Information on the machinery & equipment (where's what), health and safety warnings, etc.
- **Metrics** – Being able to measure process efficiency is always useful. By defining the metrics in your SOP, you can always check back on whether the process is efficient over time. If, for example, you discover that a process is not as efficient as usual, there might be something wrong with the machinery.
- Most of the information we've mentioned is pretty explanatory. You don't need to be a rocket scientist to create a title page, table of contents, etc.
- Documenting the procedure, however, can be hard for someone that's not skilled at process management.

### **Basic knowledge & fire extinguisher training - Blood bank**

*A session was conducted on "Basic knowledge & fire extinguisher training - Blood bank " on 17.01.16*

By MGM -Medical College kamothe Navi Mumbai, attended by 5 participants.

#### **The high-quality training for fire safety training was to:**

- To get fire safety training certificate
- confidently use a fire extinguisher
- take the correct action when you find a fire or hear an alarm
- choose the right type of fire extinguisher for your workplace
- make sure your workplace meets workplace fire safety law

On this fire safety training learning was about fire prevention, evacuation, practical fire fighting skills and much more, including hands-on practice with different types of fire extinguishers.

### HYDRANT SYSTEM TRAINING - SECURITY STAFF

A session was conducted on "Hydrant system training - Security staff" on 11.12.15

By MGM -Medical College kamothe Navi Mumbai, attended by 5 participants.

In a building, a *fire hydrant system* is a *safety measure* or *emergency equipment* required in some buildings that comprises a series of components that when assembled together provide a source of water to assist fire authorities in a fire. A *fire hydrant system* is a water supply with sufficient pressure and flow delivered through pipes throughout a building to strategically located network of valves for fire-fighting purposes.

In some circumstances, water from a reticulated fire hydrant system can also be shared with other safety measures such as automatic fire sprinkler systems or fire hose reels.

Fire hydrant systems comprise the following primary components- Pipework & Valves

- Fire Brigade Booster
- Pumpset
- Hydrant, Hydrant Valve or Landing Valve & Coupling
- Layflat Fire Hose
- Block Plan
- Water Supply & Storage

Hydrant system training - Security staff	26.12.15

### BIO MEDICAL WASTE MANAGEMENT

*A session was conducted on "Bio medical waste management" on 23.11.15 by MGM -Medical College kamothe Navi Mumbai, attended by 8 participants.*

Medical care is vital for our life and health, but the waste generated from medical activities represents a real problem of living nature and human world. Improper management of waste generated in health care facilities causes a direct health impact on the community, the health care workers and on the environment. Every day, relatively large amount of potentially infectious and hazardous waste are generated in the health care hospitals and facilities around the world. Indiscriminate disposal of BMW or hospital waste and exposure to such waste possess serious threat to environment and to human health that requires specific treatment and management prior to its final disposal. The present review article deals with the basic issues as definition, categories, problems relating to biomedical waste and procedure of handling and disposal method of Biomedical Waste Management. It also intends to create awareness amongst the personnel involved in health care unit. Biomedical waste management has recently emerged as an issue of major concern not only to hospitals, nursing home authorities but also to the environment. The bio-medical wastes generated from health care units depend upon a number of factors such as waste management methods, type of health care units, occupancy of healthcare units, specialization of healthcare units, ratio of reusable items in use, availability of infrastructure and resources etc.

A major issue related to current Bio-Medical waste management in many hospitals is that the implementation of Bio-Waste regulation is unsatisfactory as some hospitals are disposing of waste in a haphazard, improper and indiscriminate manner. Lack of segregation practices, results in mixing of hospital wastes with general waste making the whole waste stream hazardous. Inappropriate segregation ultimately results in an incorrect method of waste disposal.

Inadequate Bio-Medical waste management thus will cause environmental pollution, unpleasant smell, growth and multiplication of vectors like insects, rodents and worms and may lead to the transmission of diseases like typhoid, cholera, hepatitis and AIDS through injuries from syringes and needles contaminated with human. So this session was organized to train and educate about bio medical waste management.

### NEEDLE STICK INJURY PROTOCOL

A session was conducted on "Needle Stick injury protocol" on 19.01.16 by MGM -Medical College Kamothe Navi Mumbai, attended by 8 participants.

**Needlestick Injury** : the accidental puncture of the skin by a needle during a medical intervention.

Accidental exposure to blood caused by needle injuries or injuries following, cutting, biting or splashing incidents carries the risk of infection by blood-borne viruses such as the hepatitis B virus (HBV), hepatitis C virus (HCV) and human immunodeficiency virus (HIV). HBV risk = 5 – 40% HCV risk = 3 – 10% HIV risk = 0.2 – 0.5%. HBV prevalence is higher than average in intravenous drug users, homosexual men and in people from developing countries. HCV prevalence is higher in people who have had multiple blood transfusions, in dialysis patients and intravenous drug users.

HIV prevalence is also higher in homosexual men, in intravenous drug users and in people from areas where the condition is endemic.

Accidental contact with blood occurs especially in the following situations:

1. During re-capping
2. During surgery, especially during wound closure
3. During biopsy
4. When an uncapped needle has ended up in bed linen, surgery clothing etc
5. When taking an unsheathed used needle to the waste container
6. During the cleaning up and transporting of waste material
7. When using more complex collection & injection techniques
8. In A&E (Accident and Emergency) departments
9. In high-stress interventions (diagnostic or therapeutic endoscopy in patients with gastrointestinal bleeding)

Although this does not occur very often, there are other blood-borne microorganisms which can be transmitted via blood exposure:

- Other hepatitis viruses
- Cytomegalovirus (CMV)
- Epstein-Barr virus (EBV)
- Parvovirus
- Treponema pallidum (syphilis)
- Yersinia
- Plasmodium

Accidental exposure to blood following a needle stick injury is probably one of the most common occupational health accidents in medical care.

**MGMCHMS****Basic course in Clinical Biomechanics  
2016****MGMHS****Day 1: 26/02/2016**

Time slots	Activity
9.00-9.30 am	Registration
<b>Motion Analysis</b>	
9.30-10.00am	Eyeball Analysis of Motion (Gait)
10.00-10.30 am	Video graphic analysis of Motion (Gait)
10.30-10.45 am	Tea Break
10.45 -11.30am	2 D analysis of Motion (Gait)
11.30 am – 1.00 pm	3 D analysis of Motion (Gait)
1.00- 1.30 pm	Lunch
<b>Surface EMG</b>	
1.30-2.30 pm	How is Surface EMG different from needle EMG? How to record SEMG?
2.30-2.45 pm	Tea break
2.45-4.00 pm	Interpretation & reporting of SEMG Clinical application of SEMG

**Day 2: 27/02/2016**

Time slots	Activity
<b>Movement Kinetics</b>	
9.00-10.30am	Theories of kinetics
10.30-10.45 am	Tea Break
10.45 -11.30 am	Measurement & analysis of kinetics
11.30 am– 1.00 pm	Interpretation & reporting of kinetics
1.00- 1.30 pm	Lunch
<b>Balance and Foot Pressure</b>	
1.30-2.30 pm	How to assess static & dynamic balance? How to interpret & report balance?
2.30-2.45 pm	Tea Break
2.45-4.00 pm	Foot pressure distribution–How to measure it? (a) Manual analysis of foot prints (b) Computed analysis of foot prints (c) Pressure platform Interpretation & reporting of foot pressure distribution

**Day 3: 28/02/2016**

Time slots	Activity
<b>Activity Monitoring and Energy cost</b>	
9.00-10.30am	How to monitor Activity (Walking)? Activity Log, Pedometers, Accelerometer
10.30-10.45 am	Tea Break
10.45 -11.30 am	How to measure energy cost of activity (Walking): Indirect method & Direct method
11.30 am– 1.00 pm	Interpretation & reporting of energy cost
1.00- 1.30 pm	Valedictory Function

## Course in Clinical Biomechanics

**Pre-requisites:** BSc in Health Science and/or Engineering related field relevant to the area of Clinical Kinesiology

### Objectives:

1. Understand basic methodology of movement analysis
2. Understand the principles of biomechanical modeling
3. Understand theories of movement control and loading
4. Able to integrate and apply the above to analyze movement problems encountered in patient population
5. Bridging the gap between research and industry- entrepreneurship

**Learning Outcomes:** On completion of this course you will achieve a better understanding of scope of movement analysis in patient evaluation

**Venue:** MGM Centre of Human Movement Science, MGM Multi specialty Hospital, Sector 30, Vashi, Navi Mumbai.

**Fees:** INR 6500/-

**Dr. Rajesh B. Goel**  
Registrar  
MGM INSTITUTE OF HEALTH SCIENCES  
(DEEMED UNIVERSITY u/s 3 of UGC Act, 1956)  
NAVI MUMBAI- 410 209

2.45 - 3.25 pm	Motor control of functional movement: the brain as a problem solver	Prof.Robert Van Deursen
3.30 - 3.45 pm	Tea break	
3.45-4.30 pm	Movement control related exercise –practice session on force plate using COM & COP in small groups in different conditions	
<i>Day 3: 3<sup>rd</sup> April 2016</i>		
<i>Activity: Movement disorders in clinical environment</i>		
9.00-9.40am	Musculo-skeletal conditions: Relation between loading, joint stability & articular cartilage damage (OA)	Prof.Robert Van Deursen
9.45-10.25am	Neurological conditions- Motor control in stroke & CP- RPM,TS,AM	Dr. Rajani P Mullerpatan, Dr. Triveni Shetty (PT) and Dr.Akruti Mehta (PT)
10.30-10.50 am	Tea break	
10.50—11.30 am	Activity monitoring & measurement of energy cost	Dr.Bela Agarwal (PT)
11.35—12.15 pm	Rehabilitation technology- continuum from clinical needs- research –industry entrepreneurship	Prof.B. Ravi
12.20 - 1.00 pm	Group discussions-groups including Physiotherapists & engineers Use of movement analysis to guide rehabilitation -roadmaps	Dr.Bela Agarwal (PT) & Dr.Yuvraj Singh (PT)
1:00 – 2:00 pm	Lunch	
<i>Activity: Integration</i>		
2.00-2.40 pm	Plenary-Presentations from group discussions 5 min presentation for each group	Dr. Rajani P Mullerpatan
2.45 - 3.30pm	Framework for clinical applications	Dr. Rajani P Mullerpatan
3.30-4.00pm	Course Evaluation & feedback (opinion)	Dr. Rajani P Mullerpatan
4.00pm onwards	Tea	

Challenge, coordinated a team of over 20 researchers for a study of ageing in Australia, and investigated the mechanics of activities of daily living in India.

**Dr. Rupesh Ghyar, BETiC- IITB:** Rupesh holds a doctorate degree from IIT Bombay. His PhD thesis focused on Systematic Approach for Functional and Surgical Suitability Evaluation of Mega Endo-prostheses, which involves standardization of FEA coupled with experimental evaluation. He has a Masters degree was in Bioengineering, from University of Strathclyde (UK) and Bachelor's degree, in Mechanical Engineering, COEP, Pune. He has worked for six years as a Senior Research Associate in OrthoCAD Network Research Cell at IIT Bombay. Earlier, he was a business development manager for OSIM India, an orthopaedic implant manufacturer.

**Dr. Vikas Karade, BETiC – IITB:** Vikas holds a B.Tech+M.Tech from IIT-Bombay and soon to finish his PhD. He worked in surgical instrumentation design for his masters project. His PhD research involves development of an algorithm named as XrayTo3D which can generate 3D model of bone from its 2D X-ray images. The algorithm is being used to develop tablet based orthopaedic surgery planning software - Tabplan3D. The above work won the GYTI-2014 award, President's residence In-Scholar award and DST-Lockheed Martin IIGP -2015 award.

**About MGM Centre of Human Movement Science:** MGM Center of Human Movement Science (CHMS) was established in collaboration with Indian Institute of Technology Bombay and International Society of Biomechanics to address an urgent need to integrate clinical biomechanics in Indian healthcare. The centre was inaugurated by visionaries in this area namely Dr Anil Kakodkar (Chairman Rajiv Gandhi Science and Technology Commission), Shri Kamal Kishore Kadamji (Chairman Mahatma Gandhi Mission Trust), Prof. Dr. Ravindra Bapat (Seth GS Medical College), Prof. B. Ravi (BETiC- IITB) and Prof. Robert Van Deursen (Cardiff University, UK) on 5th October 2015. Following an intense training session of Physiotherapists and engineers, the Centre is now open for movement analysis testing for patients, training of health care professionals and engineers in clinical biomechanics and interdisciplinary research projects.

Interdisciplinary collaborative research projects are continuously designed and implemented at the Centre to address health care needs of India. To name a few ongoing projects in the current year, in collaboration with BETiC, IITB, the Centre is involved in designing an indigenous device for plantar tissue stiffness measurement for its application in people with reduced foot sensations such as diabetes, leprosy etc. DBT has recently sponsored a project to develop a powered trans-tibial prosthesis in collaboration with IITB.

**Report on faculty Development Session -**

Title: Heartfulness Meditation – Art of Self development.

Date: 16/01/2016

Time: 11.30 am onwards

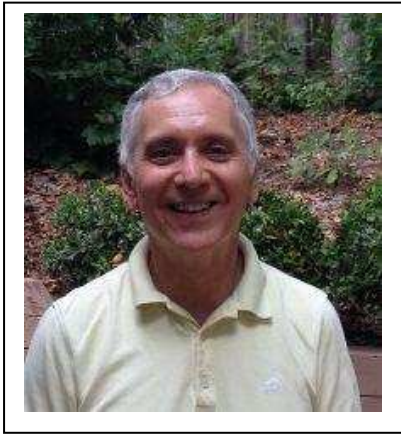

Venue: MGMIHS University	<b>Guest Speaker:</b> John Barlow, Betsy Barlow, USA
--------------------------	--

The art of self-development is an art and science – to develop oneself, we need the cooperation of our fickle mind. So how do we train our mind? There is but one answer – Meditation.

Study upon study in the developing field of brain science has shown meditation to have innumerable, and remarkable, benefits, including improved mental health, a better immune system, increased mental clarity and learning capability, better right- and left-brain integration, and the increased capacity for ethical decision making.

John Barlow will talk about how he juggled his responsibilities and quest for self-development through meditation. His wife is also an experienced Heartfulness Meditation Trainer.

They will also give an experience of Heartfulness Meditation to all participants.

### **John Barlow;**

John worked over 25 years in the field of healthcare administration in the states of Massachusetts and Rhode Island in the USA.

He recently retired from Boston Medical Center as the Sr. Director of Ambulatory Operations in the Department of Medicine, where he oversaw a number of physician practices with over 200 physicians in a variant of specialties.

John has been practicing and teaching Heartfulness meditation for over 40 years.

John and Betsy have served as Regional in Charge and Regional Coordinator, respectively, for North America.

### **Betsy Barlow;**

Betsy holds a BA in Holistic Studies from Vermont College and practices complimentary therapy in the following specialties; Jin Shin Jyutsu and Reconnective Healing. She has been practicing and teaching Heartfulness meditation for over 40 years. John and Betsy are the parents of two wonderful children.
